Nicole Duncan  
Company Secretary  
BHP Billiton Limited
BHP Billiton today further outlined its productivity agenda to capitalise on the next phase of the Asian growth cycle.

Speaking at the Australian National Conference on Resources and Energy, BHP Billiton President, HSEC, Marketing and Technology, Mike Henry, said the commodities that would feed future China growth would require Australia’s resources industry to continue to improve its competitiveness.

“We see moderation in the rate of GDP growth in China, and a reduction in manufacturing and investment share over time, but it is really important to note that there is still an incredibly large opportunity to be captured from a commodity demand perspective.

“Commodity demand growth will remain robust as the fundamentals of wealth creation, demographics and urbanisation continue to drive demand for resources. However the shifting dynamics of economic growth will challenge Australia’s traditional understanding of core ‘commodities’.

“As China transitions to a more consumption based economy, and the level of ‘true’ urbanisation increases, we expect that commodities supporting the production of food, energy and consumer goods will see more durable demand growth over an extended part of the economic development curve.”

Mr Henry said it was critical industry and policy makers worked together to capitalise on these opportunities.

“We believe the vast majority of the productivity challenge lies with industry and it is incumbent on employers to create an environment that inspires people to work smarter and rewards productivity improvements.

“For BHP Billiton this means working our assets both ‘smarter’ and harder. Our concentrated effort to reduce operating costs and drive productivity improvements delivered a significant US$2.7 billion reduction in controllable cash costs in the 2013 financial year. We continue to identify process improvement opportunities across the business and we are creating strong competition for capital,” he said.

Mr Henry highlighted that government also had a role in securing future investment – particularly in taxation and industrial relations policy and addressing duplication between state and federal regulatory obligations.
“To ensure Australian projects are not disadvantaged, tax policy should target reforms that deliver more competitive, sustainable taxation and help make the system more efficient and internationally competitive. Similarly we can reduce the burden of duplicated green tape processes while still maintaining the highest environmental standards,” he said.

“When it comes to industrial relations, BHP Billiton is an advocate for a framework that draws employees and employers onto the same page and allows for more direct employee engagement.”

China: Looking forward

Mike Henry, President HSEC, Marketing and Technology
BHP Billiton
October 2013
Forward-looking statements
This presentation includes forward-looking statements within the meaning of the U.S. Private Securities Litigation Reform Act of 1995 regarding future events, conditions, circumstances and the future financial performance of BHP Billiton, including for capital expenditures, production volumes, project capacity, and schedules for expected production. Often, but not always, forward-looking statements can be identified by the use of the words such as “plans”, “expects”, “expected”, “scheduled”, “estimates”, “intends”, “anticipates”, “believes” or variations of such words and phrases or state that certain actions, events, conditions, circumstances or results “may”, “could”, “would”, “might” or “will” be taken, occur or be achieved. These forward-looking statements are not guarantees or predictions of future performance, and involve known and unknown risks, uncertainties and other factors, many of which are beyond our control, and which may cause actual results to differ materially from those expressed in the statements contained in this presentation. For more detail on those risks, you should refer to the sections of our annual report on Form 20-F for the year ended 30 June 2013 entitled “Risk factors”, “Forward looking statements” and “Operating and financial review and prospects” filed with the U.S. Securities and Exchange Commission. All estimates and projections in this presentation are illustrative only. Our actual results may be materially affected by changes in economic or other circumstances which cannot be foreseen. Nothing in this presentation is, or should be relied on as, a promise or representation either as to future results or events or as to the reasonableness of any assumption or view expressly or impliedly contained herein.

Non-IFRS financial information
BHP Billiton results are reported under International Financial Reporting Standards (IFRS) including Underlying EBIT and Underlying EBITDA which are used to measure segment performance. This presentation also includes certain non-IFRS measures including Attributable profit excluding exceptional items, Underlying EBITDA interest coverage, Underlying effective tax rate, Underlying EBIT margin, Underlying EBITDA margin and Underlying return on capital. These measures are used internally by management to assess the performance of our business, make decisions on the allocation of our resources and assess operational management. Non-IFRS measures have not been subject to audit or review.

UK GAAP financial information
Certain historical financial information for periods prior to FY2005 has been presented on the basis of UK GAAP, which is not comparable to IFRS or US GAAP. Readers are cautioned not to place undue reliance on UK GAAP information.

No offer of securities
Nothing in this presentation should be construed as either an offer to sell or a solicitation of an offer to buy or sell BHP Billiton securities in any jurisdiction.

Reliance on third party information
The views expressed in this presentation contain information that has been derived from publicly available sources that have not been independently verified. No representation or warranty is made as to the accuracy, completeness or reliability of the information. This presentation should not be relied upon as a recommendation or forecast by BHP Billiton.
China economic outlook

Implications for Australia
Relative to previous decades, the pace of growth in China is expected to moderate.

GDP growth (YoY %)

**Australian Productivity**

(Indexed to 2011)

Summary

- Chinese economic growth is expected to be 7-8% in the short to medium term
- Urbanisation and consumption will support economic growth as manufacturing declines
- Commodity consumption patterns will evolve, providing robust energy and metals demand
- Restoring Australia’s global competitiveness will underpin future capital investment
