Executive Summary

URS Australia Pty Ltd. (URS) was commissioned by BHP Mitsubishi Alliance (BMA) to perform a preliminary site investigation (PSI) on the Caval Ridge project site south of Moranbah, Queensland, as part of a Baseline Environmental Study report. The PSI was conducted in accordance with the Queensland EPA’s Draft Guidelines for the Assessment and Management of Contaminated Land in Queensland (May 1998).

The objectives of the PSI were to evaluate and identify potential contaminated sites within the project site as a result of current and past practices, to allow BMA to identify potential liabilities should mining activity be planned for the site.

The Caval Ridge project site is comprised of two sections which are split by Cherwell Creek. The northern section covers 4,581 Ha of pastoral farmland and is located approximately 6 km south of Moranbah, Queensland. The topography of the area is mostly flat to rolling hills and has little remnant vegetation. The area is located adjacent to the Moranbah Access road to the east and crosses the Peak Downs Highway, with the southern boundary being Cherwell Creek to the north of the Peak Downs Mine. The southern section covers 1,926 Ha and encompasses the area between Cherwell and Harrow creeks with the northern and southern boundaries being the limits of the Mining Lease ML1775 and a new mining lease fenceline south of the Northern Haul Road. This southern area is mainly within the Peak Downs Mine operational boundaries.

A review of historical title information and historical aerial photographs indicates the project site has been used for pastoral farming for the last 50 years, with some minor land parcels being used for other activities. The Peak Downs Mine northern pits (known as Heyford pit) are located on a single land parcel (Lot 18 on GV135).

A review of the available geological information indicates that the area is underlain by undifferentiated Cainozoic sands and sandy soils, some Tertiary aged basaltic flows of the Suttor Formation and areas of Cainozoic sands overlying the Blackwater Group (consisting of siltstone, quartz sandstone, lithic sandstones and calcareous and carbonaceous sandstones in places).

Anecdotal evidence provided by interviews with landholders suggests that no groundwater bores are used in the project site or on the surrounding farms. It is not known at the time of this investigation the extent of groundwater extracted by the BMA Peak Downs Mine within the project site.

Site visits were conducted by URS in December 2007 and April 2008 to inspect a number of areas indicated as possible areas of concern from the site history review and interviews conducted with Peak Downs Mine personnel and local landholders. A number of specific sites were noted as potential areas of concern within the larger project site:

- The Kalari trucking workshop and yard has a number of activities with potential impacts to soil and groundwater;
- A set of cattle yards was identified as having potential impacts from pesticide use;
- An inhabited farmers cottage and shed has potential for impacts from fuel storage and pesticide use;
- A rifle range on the Horse Creek property may have potential lead impacts;
- Dragline transformer past and current locations on the Peak Downs Mine may have potential for petroleum and coolant oils impacts;
- Mobile fuel tanks used at the Peak Downs Mine may have potential for petroleum impacts to soils and water;
- Un-rehabilitated exploration drill pads on the Peak Downs Mine area; and
- Official and unofficial parking areas and waste off-load areas on the Peak Downs Mine.

Limited soil samples have been collected for analysis at locations where it would appear leaks or spills have occurred beneath mobile plant on the mining lease. These have been analysed for heavy metals, TPH, BTEX, PAH/Phenols and PCBs.
Executive Summary

Analysis of limited soil samples collected from beneath an identified mobile transformer and mobile fuel tank indicate probable diesel fuel spills that occurred historically. Characterisation of the vertical and lateral extent of these impacts should be determined with consideration of the intended land use for the duration of the project (e.g. continuing hydrocarbon storage) and intended land use at end of mine life. Where contamination is identified prior to, or following, use of land, on-site remedial works should be conducted based on the intended land use.

Further investigations on the indicated sites are recommended to address the potential impact of the identified areas of concern, to assess the potential risks associated with these areas, and to quantify the extent of any liabilities in terms of any cost to remediate, if required. This investigation should be conducted in the context of the eventual land use for each site.

URS recommends that BMA perform a further investigation to delineate, remove and validate the cattle yard area prior to any disturbance and before any box-cut spoil is emplaced. Additionally, URS recommends that BMA locate and remove the soils that were originally stripped from the yards that have been “temporarily stored” elsewhere on site and include them in the remediation effort.
Section 1

Introduction

1.1 Purpose

As part of the Baseline Environmental Study for the Caval Ridge Project, URS Australia Pty Ltd (URS) was commissioned by BHP Billiton Mitsubishi Alliance Coal Operations Pty Ltd (BMA) to undertake a Preliminary Contaminated Land Site Investigation (PSI) to evaluate the potential for contaminated land within the Caval Ridge Project site (project site), shown in Figure 1.

1.2 Site Description

The project site is located north of the operational BMA Peak Downs Mine, 6 km south of Moranbah and 190 km south-west of Mackay. The project site covers the northern extent of the BMA Mining Lease (ML 1775) from the northern bank of Harrow Creek to the Moranbah Access road near the Moranbah Airport and part of the future Mining Lease application (formerly MDLA 364 and 366) running along the western boundary of ML 1775. Based on the current land use, the project site has been split into two sections, for the purposes of this assessment:

- Northern section – grazing, small commercial businesses and mine exploration; and
- Southern sections – mining and exploration activities.

Each of these sections has a different history of potentially contaminating activities. Figure 1 shows the boundaries of the northern and southern sections as assessed in this report.

The project site overlaps the following tenements:

- ML 1775 – BHP Coal Pty Ltd and Others (C.Q.C.A.) (Status: Granted [expires 31 December 2010])
  - Lots 14 and 16 on SP163605;
  - Lots 7,8,9 and 10 on RP615467;
  - Lot 14 on GV116;
  - Lot 13 on GV225;
  - Lot 18 on GV135;
  - Lot 4 on SP174999;
  - Lot 4 on RP884695; and
  - Lot 13 on SP151669.

- Future Mining Lease application by C.Q.C.A (formerly MDLA364 and MDLA 366) –
  - Lot 16 on SP163605;
  - Lot 1 on RP616897;
  - Lot 10 on SP137499
  - Lot 14 on GV116;
  - Lot 13 on SP151669);
  - Lot 47 on GV226; and
  - Lot 18 on GV135.

The project site covers approximately 6,507 hectares. The area is located within Belyando Shire (now part of the Isaac Region) and the northern section comprises predominantly of large rural holdings of and
Section 1

Introduction

Partially-cleared pastoral land. The southern section incorporates the northern-most pits of the Peak Downs Mine and includes land used for mining infrastructure. Moranbah Township is located approximately 6 km to the north of the project site.

The northern section of the project site primarily consists of the Horse Creek property and the eastern and part of the southern section of the Buffel Park property, some smaller lots including the Kalari Trucking workshop and a small section of the Heritage Boarding Kennels and Cattery.

The southern section of the project site consists primarily of the operational Peak Downs mine between the Cherwell Creek diversion and Harrow Creek.

Large rural holdings of pastoral land surround the project site to the east, west and immediate north; and the operating BMA Peak Downs Mine is located to the south. There are no National Parks, State Forests or Nature Reserves in or around the vicinity of the project site. Key features of the project site are shown on Figure 1.

Land tenure boundaries, including mining tenements are presented in Figure 2.

1.3 Scope of Works, Objective and Methodology

The objective of this PSI was to identify potential and/or actual contamination within the Project site, in accordance with the Draft Guidelines for the Assessment and Management of Contaminated Land in Queensland (1998). To achieve this objective the following investigations were undertaken:

- a site history assessment, including a review of current and historic titles and aerial photographs and interviews with local land holders and Peak Downs Mine employees to identify historical activities that have had the potential to cause contamination of the site;
- identification of any areas listed on the Environmental Management Register (EMR) or Contaminated Land Register (CLR) under the Environmental Protection Act (1994);
- site inspection to assess of the environmental setting of sites and surrounding areas to identify potential sources and areas of site contamination; and
- preparation of a report detailing the investigations undertaken, the findings of the assessment, and a discussion of the findings including an outline of applicable further investigations and remediation options, where warranted.
Section 2  Site Information

2.1  Land Use

2.1.1  Current land use

The northern section of the project site is comprised predominantly of large pastoral properties used for beef cattle grazing with other minor uses in the project site as follows:

- The Kalari Trucking workshop and yard (Lot 16 on SP163605) and the Heritage Boarding Kennels and Cattery (Lot 4 on RP884695) are located on the north-eastern section of the project site adjacent to the Moranbah Access Road;

- One inhabited homestead (Lot 14 on SP163605) and an inhabited cottage (Lot 13 on SP151669) with a cattle holding yard, are located within the project site. Both the homestead and cottage have self contained water supply and septic systems.

Moranbah airport is located approximately 200 metres to the north-east of the project site (Lot 17 on GV130). The airport consists of a runway, small aircraft fuelling depot with above-ground tanks, a small reception building and a toilet block with septic tank. The airport is within the boundaries of ML1775 but is not included in the project site for Caval Ridge.

The Shell roadhouse is located approximately 2.5 kilometres to the west of the project site on the corner of the Peak Downs Highway and the Moranbah Access Road. This is a small operation consisting of fuelling bowser, short-order restaurant, shop and truck parking area.

The southern section of the project site comprises the northern three pits of the operational Peak Downs Mine and the associated infrastructure. This area contains 10 North, 11 North and 12 North ramps and haul road and is collectively known as the Heyford pit. The area has not been actively worked for a number of years although some overburden removal and blasting works have recommenced in 2008.

The southern project site is delineated by the diversion of Cherwell Creek to the north-west, ML1775 to the north-east, the diversion of Harrow Creek to the south-east and the south-western boundary of the future Mining Lease (formerly MDLA 366).

Figure 2 shows the land use and land tenure details for the affected properties.

2.1.2  Proposed Development

URS understands BMA wishes to develop an open Cut Coal mine with associated access, coal washing facility and rail loop. Figure 4 shows the location of infrastructure and the development plan over the life of the proposed mine. Further information about the proposal may be found in the Caval Ridge Mine Environmental Impact Statement (URS, 2008).

2.2  Environmental Setting

2.2.1  Geology and Soil

According to the Geological Survey of Queensland 1:250,000 Series, Clermont Sheet, the area is underlain by undifferentiated Cainozoic sands and sandy soils, with some Tertiary aged basaltic flows of the Suttor Formation and the Blackwater Group (consisting of siltstone, quartz sandstone, lithic sandstones and calcareous and carbonaceous sandstones in places).

The Caval Ridge Project – Soil Survey and Assessment report (GSS Environmental, 2008) states the following regarding the geology and soils of the project site:

*The study area is situated over a section of the Moranbah Coal Measures, which range in thickness from 250 m to 300 m, and variably consist of sandstone, shale, mudstone and coal. The aggregate thickness of coal in the Moranbah Coal Measures ranges from 12 m to 24 m, and may consist of up to eight seams.*
The study area consists of the following geomorphological land zones of Cainozoic age:

- Alluvial plains and piedmont fans adjoining the Cherwell & Heyford Pits;
- Clay deposits under gently undulating plains within the Cherwell Pit area;
- Sand deposits on extensive flat or gently undulating plains adjoining the Heyford Pit;
- Igneous rocks, flood basalts forming extensive plains and occasional low scarps to the north of the Cherwell Pit; and
- Duricrusts formed on a variety of rock types.

Further detailed information is available in the Geology and Soils section of the Caval Ridge Coal Mine Environmental Impact Statement (URS, 2008).

2.2.2 Topography

The topography of the general area is generally flat to rolling. Gullies associated with watercourses extend to 3-4 metres below the surrounding natural ground surface.

The topography of the catchments within the project site is generally flat to undulating. Elevation across the project site ranges from 220 mAH to 274 mAH, and surface slopes <1% grading to east-north east towards the Isaac River which is the most prominent regional drainage feature. The majority of the catchment has been cleared for agriculture (cattle grazing) and several small farm dams have been constructed within the catchment to support these agricultural activities.

2.2.3 Surface Hydrology and Hydrogeology

Hydrological Overview of the Caval Ridge Project site

The project site covers tributary streams of the Isaac River in the headwaters of the greater Fitzroy River catchment. The area is generally divided by a relatively indistinct ridgeline between two watersheds: the northern watershed includes Horse Creek and tributaries; the southern watershed includes Nine Mile Creek, Cherwell Creek and tributaries. Within the project site, Harrow and Nine Mile Creeks join Cherwell Creek and downstream (east) of the project site, Cherwell Creek joins the Isaac River. Horse Creek joins Grosvenor Creek (Isaac River tributary).

All watercourses and tributaries within the project site are ephemeral watercourses. Periods of flow are generally short and limited to periods during and after rainfall. There is no evidence of significant contribution to stream flows from groundwater sources.

Hydrogeology of the Caval Ridge Project site

URS has installed a 16 groundwater monitoring bores at the project site during 2008, water samples from these bores indicate groundwater is brackish to saline and not contaminated by heavy metals, however was not analysed for Total Petroleum Hydrocarbons (TPH) or Benzene, Toluene, Ethyl benzene and Xylene (BTEX). The report concluded that the groundwater is not generally suitable for human use or irrigated agriculture. The groundwater is generally usable for livestock watering, however some bores had salt levels above the ANZEC (2000) guidelines. For further information refer to the Caval Ridge Groundwater Report (URS 2008).

2.2.4 Groundwater Extraction

The Caval Ridge Groundwater Report (URS 2008) did not identify any groundwater bores used in the project site or in the surrounding farms. BMA Peak Downs Mine do not currently extract groundwater for use at the Peak Downs Mine within the project site. URS has installed 16 groundwater monitoring bores at the project site.
2.2.5 Ecological Health

This report did not assess the ecological health of the project site, however an ecological assessment has been undertaken for the project site. Refer Ecological Assessment – Caval Ridge Coal Mine Project (BAAM 2008)
3.1 Title Searches

A search of current and historical land titles (1969 to 2007) available from the Department of Natural Resources and Water (DNRW) was undertaken. Relevant title and site ownership information is summarised in Table 3-1 and certificates of title are provided in Appendix A. Easements and roadways have been included in the project site but have not been investigated as potential contamination sources for the purposes of this assessment.

Based on this title search, the majority of the properties within the project site have historically been used for grazing purposes.

Section 3  Site History Review

3.2  Aerial Photographs

As part of the site history assessment a review of historical aerial photography, available from the DNRW was undertaken. Aerial photography runs flown in 1957, 1966, 1977, 1985 and 2000 were reviewed. A BMA aerial photography run flown in late 2007 was also used for a depiction of current conditions.

The aerial photographs show the development of the infrastructure such as the Moranbah Airport, Peak Downs Mine, dams, the road network and several buildings. The aerial photographs also show land being cleared over time for pastoral or cultivation purposes. A review of the aerial photographs did not identify any evidence of a dip, race or dripping yards, however, it is possible that they occur.

Table 3-2 provides an overview of the development of the project site based on available historical aerial photography and historical title information.

3.3 Review of Government Registers

3.3.1 Vegetation Management Notices
There are vegetation management notices over the land parcels owned by BMA. It is currently unknown why these notices have been applied.

3.3.2 Environmental Protection Agency (EPA)
Activities identified as being likely to cause contamination are listed as notifiable activities under Schedule 2 of the Environmental Protection Act 1994 (EP Act). It is a requirement of the EP Act that the Queensland Environmental Protection Agency (EPA) be informed of any area that has been utilised for a notifiable activity or contaminated by a hazardous contaminant. ‘Notifiable Activities’ under Schedule 2 of the EP Act include, but not limited to, petroleum product or oil storage, cattle dips, landfills, abrasive blasting, chemical storage, mineral processing and disposal of mine wastes. The EPA maintains two registers of contaminated sites in Queensland:

- The Environmental Management Register (EMR); and
- The Contaminated Land Register (CLR).

The EMR is a land use planning and management register. The EMR, pursuant to section 374 of the Environmental Protection Act 1994, records land that has been used for a notifiable activity (i.e. land use that may cause land contamination) as well as land that has been impacted by a hazardous contaminant. The EMR provides information on historic and current land use. Sites recorded on the EMR pose a low risk to human health and the environment under the current land use and listing of a site on the EMR does not automatically mean the land must be remediated or that the current land use must cease (EPA, 2007).

The CLR is a register of ‘risk’ sites. If it has been scientifically proven that a site is contaminated, the site is registered on the CLR and action is required to either remediate or manage the site to reduce the risk of potentially serious harm to the environment and human health.

A search of the EPA’s EMR and the CLR was undertaken for the land parcels listed in Table 3-1, search results are also provided in Appendix B. There are three land parcels listed on the EMR:

Northern Section
- Lot 14 on GV116 is listed on the EMR for the notifiable activity of Petroleum Product or Oil storage.

Southern Section
- Lot 18 on GV135 is listed on the EMR for the notifiable activity of Petroleum Product or Oil storage.
Section 3  Site History Review

- Lot 10 on SP137499 is listed on the EMR for the following notifiable activities:
  - Chemical Manufacture or Formulation;
  - Chemical Storage;
  - Explosives Production or Storage;
  - Waste storage Treatment or Disposal;
  - Petroleum product or Oil Storage; and
  - Mine Wastes.

No other land parcels are currently listed on the EMR. The search identified no land parcels within the project site listed on the CLR.
4.1 Northern Section

A site inspection and discussions with leaseholders and employees at the Peak Downs Mine was conducted at a number of sites within and adjacent to the northern section of the project site between November 21, December 16, 2007 and in March 2008. In addition to a general site inspection the following locations were identified following the aerial photograph review and were targeted during the site inspection:

- Kalari Trucking Workshop and Yard;
- Cattle yards and local farm shed;
- Possible sawmill;
- Rifle Range;
- Homestead and cottage;
- EMR identified lot (Lot 14 GV116);
- Gravel pit;
- The proposed MIA; and
- Proposed rail loop.

A description of each of these locations is provided below and their locations are shown on Figure 3. Figure 4 shows the locations of these areas overlaid on the proposed mine plan.

4.2 Southern Section

A site inspection and discussions with employees at the Peak Downs Mine was conducted at a number of sites within the southern section of the project site on March 16, 2008. In addition to a general site inspection the following locations were identified following the aerial photograph review and interviews and were targeted during the site inspection:

- Dragline transformer;
- Toilet facilities for mine staff;
- Un-rehabilitated exploration drill pads;
- Lots identified on EMR (Lot 18 on GV135 and Lot 10 on SP137499);
- Mobile fuel tanks; and,
- Parking areas / waste areas.

A description of each of these locations is provided below and their locations are shown on Figure 3. Figure 4 shows the locations of these areas overlaid on the proposed mine plan.

Soil samples were taken at specific sites where soil staining or fuel odours were noticed. The results of ALS Brisbane Laboratory analyses of these samples are provided below in Section 7.3.
Potential Contamination Sources

5.1 Northern Section

Kalari Trucking Workshop and Yard

The Kalari Workshop and Yard is located on the north-eastern section of the project site on Lot 16 on SP163605, (Figure 3). The workshop and yard maintains long-haul trucks servicing the mining industry. Activities undertaken at the site include:

- preventative maintenance of long haul trucks and trailers including:
  - tyre changes,
  - oil and lubrication maintenance,
  - mechanical inspection and testing,
  - minor paint touch-ups and body cleaning.
- storage of items and substances for the purposes of vehicle maintenance;
- oil/water separation of oily liquid wastes from maintenance and washing activities;
- sediment trapping from the wash down pad;
- storage of defunct equipment and bulk chemical transport containers;
- a break and refreshment area for staff, with self contained water and septic systems; and
- administrative offices for supervisors.

During the site inspection and subsequent communication with the Kalari workshop and yard site supervisor several potential contamination sources or evidence of potential contamination were identified. Potential sources include: oil staining, minor oil or detergent spills, potential heavy metal contamination at the wash down area, sediment tank and surrounds, stored empty agricultural chemical containers, disused empty diesel and fuel storage tanks, unknown chemical bulk transport containers and a soil stockpile area at the front of the gate to the yards and workshop.

The vehicle wash-down area comprises a concrete slab (approximately 5 metres by 15 metres – shown in Plate 1) with gravity drainage to a coarse sediment trap (see Plate 2). This trap drains to an in-ground tank along with the wastewater stream from the oil separator (see below). Trucks coming to the workshop are used to transport vehicles and supplies to industries and mines within the Bowen Basin and elsewhere. There is potential for the wash-down pad, sediment traps, wastewater tank and surrounding areas to be impacted by heavy metals and other debris inadvertently picked up at these industrial sites during delivery activities and transported on the undercarriage and bodies of the trucks back to the yard.

The inspection pit is located within the workshop floor; it has a concrete floor and is lined with concrete blocks. At the time of the inspection the pit appeared to be in a well maintained and reasonably clean condition with no cracks visible in the floor. Plate 3 shows the inspection pit.

Waste oil and water mixtures from maintenance activities are diverted to a triple interceptor, separated oil is transported to an above ground waste oil storage tank (stored in one of the shipping containers at the site) and water and sediment is transported to an in-ground storage tank, see Plate 4. JJ Richards is contracted to remove waste from this sediment trap and water and sediment from the in-ground tank on an as-needs basis. The above ground waste oil tanks can hold up to 1,000 L. Northern Queensland Resources removes the waste oil from the storage tank on a monthly or as-needs basis.

Minor quantities of spray paint cans and other commercially packaged chemicals (radiator additives, glass cleaners, corrosion inhibitors etc.) are stored in the maintenance store room, see Plate 5. The store...
Section 5 Potential Contamination Sources

Room has an uncracked concrete floor and at the time of the inspection appeared to be in a clean and ordered condition with items stacked neatly in safety cupboards.

During the site inspection several empty pesticide containers were observed, see Plate 6. URS was advised by the site supervisor that these containers are cleaned and rinsed 3 times before entering the yards. They are cut open and used as temporary traps to collect waste oil.

Several small and large fuel and/or chemical storage tanks and drums are stored at the site. URS was advised by the site supervisor that these units are not currently being used and had been cleaned prior to being placed in their current locations (Plate 7, Plate 8 and Plate 9). During the site investigation these units were empty.

Oily rags and used oil filters are stored in an empty 205 litre drum (Plate 10) before being collected by Environmental Recovery Services (ERS).

Several dry wood, scrap metals and domestic waste collection bins are located on the site (Plate 11). Waste from these bins is collected by JJ Richards.

Several shipping containers appear to be permanently situated at the site. Most of the containers were inspected during the site visit, but access to some was not possible as the containers were blocked by equipment or otherwise inaccessible. Those that were inspected contained oil drums, a lubrication room and paints as mentioned above, see Plate 12 and Plate 13.

URS was advised that the drum stored adjacent to the wash down area contained ‘Biosol’ detergent. Evidence of leakage from this drum was apparent during the site visit, see Plate 14.

Several 205 litre drums of oil are located around the yards and workshop. In the lubrication room these drums are on a concrete floor with no visible cracks noted. At the time of the inspection the floor appeared to be clean, however there were several stains (Plate 15). Open drums are placed on drum drip trays designed to collect drips or spills. Oil from these drums is piped through the wall into the maintenance area. Within the maintenance area, a catchment bucket is located under the hose that is used to distribute oil around the workshop (see Plate 16). Other drums located at the site were either placed on pallets or on the ground.

Used tyres are removed from site by a qualified contractor as needed. The septic sewage tank for the amenities on site is pumped once a year by a qualified contractor. ERS remove waste engine coolant water and waste solvent from the parts washer (Plate 17).

Plate 18 shows a soil stockpile at the front gate of the Kalari yard contained within a wooden structure. No information regarding the source or nature of this material was available during the investigation.

Licenses and permits were not available at the time of the site inspection. Due to the time limitation for this investigation, these have not been provided at this time. This information will be made available to BMA in the near future.

Cattle Yards

A cattle yard is located on Lot 13 on SP151669 (see Figure 3). The yard is near the eastern boundary of the project site, approximately 1500 m to the north of the Peak Downs - Clermont highway.

The yards are approximately 50 m by 75 m and constructed of steel posts and wooden rails. This area is divided into a number of smaller yards for separating cattle. During the inspection feeding troughs, a small crush for inspection and a loading ramp built at the north-east corner were present at the cattle yards. Currently the yards are used as a small feedlot and holding pen for cattle by the current landholder.

The surrounding terrain and underlying base for the yard are silty sands. The yard itself has been lined (approximately 300-500 mm) with a layer of fill comprising of mechanically compacted clay and gravel. Overlaying this is a floor comprising of sandy silt with a thickness of 70-100 mm. The yard is situated near the cottage and shed (described below).
Section 5

Potential Contamination Sources

It is understood from discussions with the leaseholders at the time of the site inspection, that the cattle yard had been in use as a feed lot and holding yards for cattle since the 1950s.

Anecdotal evidence available through leaseholder consultation indicates that in the 1990s the Department of Primary Industries (DPI) conducted residue tests on the meat from animals that had been held in these yards and found some form of contamination. URS understands that the DPI issued a remediation order to have the top 300 – 500 mm of soil excavated and disposed of, and clean fill be laid. The current leaseholder indicated that this was duly carried out. URS understands that cattle held in the yards were later tested and the meat from these animals was found to be acceptable. A local resident indicated that the excavated soil was taken and stockpiled elsewhere on Lot 12 on SP151669 (Buffel Park), which is located outside the project site.

BMA has contacted the DPI and local council to request information from this event. It is understood that there is no further information to be found relating to the type of contamination, amount of material removed and type and quantity of backfill that was imported to site. There is also no information given regarding the location and nature of storage of the removed material, any delineation exercise to determine the limits of possible contamination or any validation sampling done to ensure all possible contaminated material had been removed.

Figure 4 shows the cattle yard in relation to the proposed mine plan for the Caval Ridge Mine development. The yard location is expected to be in the proposed spoil dump location and will require a delineation and remediation exercise before any spoil material is placed in this area.

Plate 19 and Plate 20 show the cattle yard.

Possible Sawmill Location

Consultation with employees at the Peak Downs Mine and leaseholders indicated that a small saw mill was located in the 1970s on Lot 14 on GV116, (see Figure 3).

The Non Indigenous Cultural Heritage Survey of Caval Ridge, Central Queensland (Archaeo, 2008) states the following in relation to the saw mill:

Located in the southern part of the Study Area, are three piles of sawn timber; the only remnants of a saw mill that apparently once existed in the area. Leaseholder consultation indicates this small mill was built during the 1970s by a local landowner in response to the large amount of timber being cleared in preparation for the Peak Downs mining operation. Immediately east of the piles of sawn timber are stock piles of lumber.

Anecdotal evidence suggests that the sawmill may have also been used during the construction of the original diversion of Cherwell Creek (approximately 1990) to saw felled trees into railway sleepers. It was not known whether the timber was sawn by a fixed or mobile sawmill or if the railway sleepers were treated.

A site walkover of the general area showed the sawmill had been removed, leaving a number of piles of off-cut lumber and un-sawn trees (see Plate 21). There was no other indication of the exact location of the sawmilling operation.

Rifle Range

Discussions with local leaseholders indicated the presence of a rifle range and barbecue pit within the northern section of the project site, see Figure 3.

Following the site inspection it was found that the rifle range was used by a limited number of patrons for recreational purposes only. The assumed shooting targets were mounted on star pickets and placed in front of a bunded area. Due to the nature of activities in this area, there is potential for lead to be present in the soil that forms the bund and in the surrounding area.

Plate 22 and Plate 23 show the rifle range.
Section 5  

Potential Contamination Sources

Homestead and Cottage

There is one occupied homestead (on Lot 14 on SP163605) and one occupied cottage (Lot 13 on SP151669) located within the project site, shown in Figure 3.

The homestead is situated approximately 750 metres from the Moranbah Access road on the north-eastern boundary of the project site and comprises a small house and caravans. This dwelling has self-contained potable water and septic systems.

The cottage is situated adjacent to the cattle yards on Lot 13 on SP151669. The shed associated with the cottage and yard was visually inspected, the farmer was storing minor quantities of herbicides, pesticides, small engine lubricants and fuels, including a 205L fuel tank with a hand pump, and empty fuel drums - typical of farms in the area. The cottage has self-contained potable water and septic systems.

Plate 24 and Plate 25 show the local farm shed on Lot 13 on SP151669.

EMR Identified Site

The review of the EMR identified that Lot 14 on GV116 was listed for the notifiable activity of Petroleum Product or Oil Storage. Discussions with local land holders and employees at the Peak Downs mine were undertaken as well as a site inspection within the project site boundary in an attempt to ascertain the location of this storage activity. The storage facility or a possible storage facility location was not identified during the site inspection – the reason for listing this land parcel on the EMR may relate to mobile fuel storage and use.

Further investigations to determine the location or previous location of the storage facility are required.

Gravel Pit

During the site inspection a gravel pit was identified at the northern boundary of the project site, (shown on Figure 3). The pit is situated on relatively flat land and is approximately 1.5 m deep, approximately 40 metres wide and 100m long. There is no extraction activity currently being undertaken at the pit. No information regarding the operation of the pit was available at the time of the investigation. There are piles of unidentified spoil material and broken rock in the centre of the pit, see Plate 26.

Sail material and a Perspex dome are located adjacent to the west of the pit. During communications with a local resident it was indicated that this material was the remains of the roof for the Moranbah shopping centre square. It was removed in a redevelopment of the shopping centre in 2005. It is unknown why this material was discarded in this location, however, it is not considered likely to be a potential contamination source.

5.2 Southern Section

Dragline Transformers

Peak Downs staff consultation indicated that at Peak Downs mine, mobile step-down transformers are used to convert 66kV power to 11kV three-phase electricity for use by draglines. The transformers are parked at the end of electricity transmission stublines, and power is delivered to the draglines by cables laid along the ground.

The transformers are on a caterpillar-tracked chassis and are earthed. The transformer is self-driven when moving between locations and is diesel powered. At the time of the site inspection, there were two draglines and transformers within the project site. Peak Downs staff indicated that each transformer had been in place for approximately 6 months to a year and it was usual for a transformer to remain at a station for up to two years. Plate 27 shows a mobile transformer.

Figure 3 shows the locations of the transformers in the project site during the site inspection. Both transformers had some oily staining around spigots (see Plate 28), and on the outside of the windings cases (Plate 29). Fresh leaks or pooled oils were not noted.
Section 5  
Potential Contamination Sources

It was noted that one of the transformers (numbered TSS01 in the Peak Downs Mine numbering system) had a visible stain below the chassis, shown in Plate 30. A sample of the surface soil was taken and sent to ALS Brisbane Laboratory for analysis of: 8 metals (Arsenic, Cadmium, Chromium, Copper, Lead, Nickel, Zinc, and Mercury); Total Petroleum Hydrocarbons (TPH); Benzene, Toluene, Ethyl benzene and Xylene (BTEX); Phenols; Polynuclear Aromatic Hydrocarbons (PAH); and Poly-Chlorinated Bi-Phenyls (PCB). The results of the analysis are shown in Section 7.3. Samples were not taken at the second transformer (numbered TSS04) as there was no visible evidence of surface staining.

Toilet Facility for Mine Staff

A toilet facility with self contained septic tank and above-ground water supply is shown in Plate 35. The facility is located north of the back access road close to the 10N pit (shown on Figure 3). The toilet block is inspected fortnightly with the septic tank emptied by a licensed contractor on an as-needs basis. The toilet block was noted during the site inspection to be in an orderly and clean condition with no visible leaks.

Exploration Drill Pad Sumps

During the site inspection, URS staff identified three shallow pits or sumps used for exploration drilling (see Plate 36). These pits were approximately 2 metres by 3 metres each. At the time of inspection the pits had not been backfilled and were filled with rain water. There was no visible sheen on the water and no other visible impacts in the area. It is standard BMA procedure to rehabilitate the area after drilling. The location of this site is shown on Figure 3.

EMR Identified Site

Lot 10 on SP137499 is identified on the EMR for the following Notifiable activities:

- Chemical Manufacture or Formulation;
- Chemical Storage;
- Explosives Production or Storage;
- Waste storage Treatment or Disposal;
- Petroleum product or Oil Storage; and
- Mine Wastes.

This Lot is part of the operational Peak Downs Mine (as can be seen in Figure 2 and Figure 3). Upon visual inspection of land tenure maps it was noted that the boundaries of the project site contain a very small part (15.53 Ha) of the northern end of this lot, which is used for (among other things): storage and formulation of explosives used on the mine, the coal Rejects pile, and mechanical workshops for water pumps for the mine. When conducting the site visit, it was noted that the area affected by the study does not contain any of these activities and is located some distance from any infrastructure associated with these activities.

URS considers that no further action needs to be taken in this area.

Mobile Fuel Tanks

During the site inspection, URS staff noted two mobile fuel tanks on site, within the project site. Figure 3 shows the location of these tanks.

A diesel tank was located on the northern side of 11North Pit near the back access road. This tank may have been used to supply diesel to water pumps in the pit. The tank was mounted on skids and had a capacity of 2500 litres (see Plate 31). The tank had a connected supply hose which led into the 11N pit.
Section 5  
Potential Contamination Sources

Peak Downs Mine staff were unable to determine the length of time that the tank had been in this location.

The tank was intact and in good condition. Fuel staining was visible on the filling point for the tank (Plate 32) and at the hose connection at the base. In addition, fuel staining was evident on the skids (Plate 33). There were no visible stains on the ground surface surrounding the tank, but soils had a strong petroleum odour. A surface soil sample and duplicate were collected next to the tank in the region of strong odours and sent to ALS Brisbane Laboratory for analysis of TPH, Phenols, PAH and BTEX. Results of these analyses are shown in Section 7.3.

A small trailer-mounted tank of approximately 250 litres, shown in Plate 34, was located near the junction of the North Haul Road and the 10N ramp. It was temporarily parked in an area which appeared already heavily impacted by coal rejects and truck wash down debris (shown on Figure 3 and discussed below). Samples were not taken at this location. The tank appeared in a reasonable, clean condition and appeared to have been recently parked.

Lot 18 on GV135 is listed on the EMR for the notifiable activity of Petroleum product or Oil Storage. These fuel tanks are located within this land parcel and are likely to have triggered the notification.

Parking Area / Waste Area

Plate 37 shows an area used for light vehicle parking – as indicated by the presence of a Peak Downs approved sign. The area is at the junction of the main north haul road for the mine and the turn-off for the 10N ramp and was approximately 100m by 50m wide. The location of the area is shown on Figure 3.

This area appeared heavily impacted by coal rejects and fines, and wash-down dusts from trucks; and may have been mixed with materials used to construct the haul roads (which appeared to consist of gravels and bituminous fines). Peak Downs staff informed URS that the area is not an official parking area for coal haulers or reject trucks; or known as a dumping area for fines or rejects. Plate 38 and Plate 39 show coal fines in the area. In the parking zone, there was a trailer-mounted pump and a trailer-mounted fuel tank as mentioned above.

In addition to the parking area/waste area, it was noted by URS that there were a number of features (including bunds, haul road berms, and spoil piles) impacted in a similar manner to the area described above. Coal mining rejects and dust and coal spills appear to be a common feature around the mine transport corridors.

No samples were taken at this location, however the area appeared to be impacted by mining activities and the fuel tank appeared to be temporarily parked.

5.3 Possible Unidentified Contamination Sources

The site history review, discussions with local land holders and employees at the Peak Downs mine and the site inspection have identified a number of sources which may have potential for soil and groundwater contamination on the southern section of the project site. The normal operations of the mine have required that these sources of possible contamination have been used in a certain area for a number of months and moved as required. The history of these movements may not have been documented and it is therefore difficult to assess the potential impact, if any.

Mobile transformers are used to supply motive electrical power for all dragline movements and operations. These transformers can be moved between the stubline terminals, but are not stationary for set lengths of time. Possible contamination sources from these units are as follows:

- Possible leaks and spills of diesel fuel from fuel tanks and connections;
- Possible oil spills from diesel motors; and
- Possible leaks and spills of coolant oils from the windings cases.
Section 5  

Potential Contamination Sources

Mobile or portable diesel fuel tanks are used around the mine during normal operations to supply fuel to light and heavy vehicle working in an area as the machinery may be far from fixed refuelling points. These tanks may not have detailed historical documentation on their uses and movements. A number of tanks may be in use at the same time within the project site and it is unknown where and when these tanks may have been filled and emptied. Potential sources of contamination from these tanks are as follows:

- Possible leaks and spills of diesel fuel when filling the mobile fuel tank in the field
- Possible leaks and spills from hoses and other vehicle filling points when filling from the diesel tanks.

Review of the analytical results suggests that both sites sampled contain spills of diesel fuel or engine oil. The high metals content of HA_CRCL01_0.0_16/3/08 may be a condition of the soil matrix.

The sample taken below the transformer windings case had no detectable PCBs and is therefore unlikely to be transformer coolant oil. The stains on the windings case on both transformers visited suggest the potential for contamination in other locations.

In general, waste rock from the mining activities in the pit is relocated to the low wall and associated spoil piles near to the pit. Rejects from the Run Of Mine (ROM) treatment plant are sent to a rejects pile and wash plant tailings are sent to a tailings dam for reclamation of water. At Peak Downs mine both the rejects pile and the tailings dams are located close to the washing plant, some 6 km from the Caval Ridge project site. These activities are unlikely to have any potential impact on the area.

The haul roads and other transport corridors in the mine have the potential for contamination. Within the project site boundary there are a number of locations close to the mine roads where waste rock and coal (possibly ROM coal) has been spilled or may have been deliberately off-loaded in off-road parking areas (an example of this was examined in the site inspection described above). It should be noted that these areas are not considered contaminated in the context of this report as there are no real impacts to the soils or groundwater from the coarse coal or coal fines. However there is potential for these areas to conceal possible petroleum product impacts, and remediation activities may need to consider these areas and the rehabilitation of the haul roads as part of the rehabilitation strategy.
Section 6 Proposed Development and Site Management

Figure 4 shows the proposed mine development program for Caval Ridge overlaid with the locations of the areas of potential contamination. Many areas noted in this report will not be directly affected by pit excavation during the life of the mine. These areas may be affected by access requirement later and so will still require appropriate and timely treatment. The following areas of potential contamination will require a detailed management plan due to the findings of the investigation and their location within the proposed development.

- The Cattle Yards on Lot 13 on SP151669 will require a further detailed examination and investigation. The yards would need to be removed as the box cut spoil pile is planned for the site. The investigation will need to include delineation of any contamination present to the depth of the water table; sampling, quantification and treatment of the soil removed from the yards after the original order (this soil has been removed to “temporary storage” elsewhere on the lease and will need to be recovered, along with the soils under the stockpile); and validation of clean soils around the cattle area once any contaminated material has been removed.

- Any soils affected by spilling at the Diesel tank (skid mounts) and at the transformer locations (both current and historical) will need to be removed and stockpiled separately for remediation, this soil may not be reused as topsoil. These areas will be affected as the pit excavation advances to the north-west over the mine life.

- The development of Heyford Pit will require the removal of potentially contaminated soils from five sites over the life of the mine. These include areas that previously had diesel tank skid mounts, transformers, toilets and septic tanks, and drilling pad sumps.

- The development of Horse Pit will require the removal of potentially contaminated soils from a former gravel pit site, located on the northern section of the development.

- The development of Horse Creek Diversion, will require the removal of potentially contaminated soils from the site currently occupied by the Kalari Workshop and Yard.

Further recommendations are detailed below. The Draft Environmental Management Plan given in the Caval Ridge Environmental Impact Statement (URS, 2008) gives detailed information on the treatment of the noted areas.
Section 7  Soil Analyses

7.1  Sampling Methodology

Groundwater sampling has not identified any contamination (refer to the Caval Ridge Groundwater Report, URS 2008).

The northern area site inspection identified a number of locations of possible impact to soils as a result of potentially contaminating past and current activities. At this stage soil sampling to confirm the contamination source (if any) and the extent of contamination (if any) was not undertaken.

Prior to any soil disturbance, further investigations of each of the areas of potential contamination will need a comprehensive sampling program to identify the impacts to soils and groundwater, if any.

During the southern area site inspection two locations were noted as having a possible impact to soils – a spill noted under a transformer and a strong odour in soils next to a mobile diesel tank.

Sample number HA_CRCL01_0.0_16/03/08 was taken from the soil under transformer TSS01. Soil was scraped from the surface using a garden cultivator and nitrile glove and packed without headspace into a glass jar. The jar was then placed into a chilled esky. Sample number HA_CRCL02_0.0_16/03/08 was taken from the soil near the skid-mounted diesel fuel tank at 11North pit. Soil was collected using a nitrile glove and placed without headspace in a glass jar. The jar was put into an ice-brick chilled esky for transport to the ALS Brisbane laboratory. Sample HA_CRQC01_0.0_16/03/08 is a duplicate of HA_CRCL02_0.0_16/03/08.

All samples of the soil (including a field rinsate and trip blank) were sent for ALS Brisbane laboratory analysis. The range of analyses included the following:

- Total Petroleum Hydrocarbons (TPH);
- Benzene, Toluene, Ethyl benzene and Xylene (BTEX);
- Heavy metals (arsenic, cadmium, chromium, copper, lead, mercury, nickel and zinc);
- Phenols; and
- Polynuclear Aromatic Hydrocarbons (PAH).

In addition Sample HA_CRCL01_0.0_16/03/08 was analysed for Total Poly-Chlorinated Biphenyls (PCB).

7.2  Applicable Investigation Levels

7.2.1  Soil Investigation Levels

The investigation levels adopted for comparison of the soil analytical results for this Preliminary Site Investigation are discussed below. The adopted investigation levels (ILs) are summarised in Table 7-1.

- The Environmental Investigation Levels (EILs), developed by the Queensland Environmental Protection Agency (QEPA) and published in the “Draft Guidelines for the Assessment & Management of Contaminated Land in Queensland”. It is noted that the QEPA has adopted the same values for the HILs commercial/industrial exposure settings as the NEPM HILs for commercial/industrial land use, for the analytes in Table 7-1.

- The Health-based Investigation Levels (HILs) for Commercial/Industrial ‘F’ exposure settings, developed by the National Environment Protection Council (NEPC), as documented in the “National Environment Protection (Assessment of Site Contamination) Measure” (the NEPM), published in December 1999.
Section 7  Soil Analyses

There are no published investigation levels for non-speciated TPH fractions, although the EPA has developed guideline investigation levels for TPH which are used for assessing service station sites.

Section 7  Soil Analyses

7.3 Analytical Results

Analytical results for the three samples sent to ALS Brisbane for analysis are shown in the Soil Analytical Results table. Further details can be found in the ALS Brisbane Laboratory reports in Appendix C.

7.3.1 Total Petroleum Hydrocarbons

Two primary samples were analysed for TPH as part of this investigation. Each sample contained concentrations above laboratory limits of reporting in the following fractions:

- HA_CRCL01_0.0_16/3/08 (C₁₀⁻C₁₄ 350 mg/kg; C₁₅⁻C₂₈ 38,900 mg/kg ; C₂₉⁻C₃₆ 810 mg/kg); and
- HA_CRCL02_0.0_16/3/08 (C₁₀⁻C₁₄ 4,390 mg/kg; C₁₅⁻C₂₈ 30,100 mg/kg ; C₂₉⁻C₃₆ 170 mg/kg).

The concentrations reported in these fractions exceed the adopted EILs.

7.3.2 BTEX

Two primary samples were analysed for Benzene, Toluene, Ethyl benzene and Xylene (BTEX) as part of this investigation. BTEX compounds were not detected above laboratory limits of reporting in the samples analysed.

7.3.3 Heavy Metals

Two primary samples were analysed for selected heavy metals for this investigation. Analysis showed quantities of Chromium, Copper, Lead, Nickel and Zinc above the laboratory level of reporting in all samples. Arsenic, Cadmium and Mercury were below the level of reporting for all samples. Concentrations exceeding the adopted EILs were recorded for chromium (54 mg/kg) and nickel (88 mg/kg) in sample HA_CRCL01_0.0_16/3/08.

7.3.4 Phenols

Two primary samples were analysed for Phenols as part of this investigation. No Phenols were detected above laboratory limits of reporting in the samples analysed.

7.3.5 Polynuclear Aromatic Hydrocarbons

Two primary samples were analysed for PAHs as part of this investigation. One sample had concentrations of Phenanthrene above the Laboratory level of reporting.

- HA_CRCL01_0.0_16/3/08 recorded concentrations of Phenanthrene of 3.8 mg/kg.

In addition, the QA/QC duplicate sample HA_CRQC01_16/3/08 recorded concentrations of Phenanthrene of 4.0 mg/kg. The Primary sample for this Duplicate did not show levels above the limit of reporting.

7.3.6 PCBs

Sample HA_CRCL01_0.0_16/3/08 was analysed for Total PCBs as it was collected under the transformer windings case. PCBs were not detected in the sample above the laboratory level of reporting.
Section 8

Analytical Data Validation

8.1.1 Methodology

Analytical data validation is a process carried out to assess the quality of the data reported, and to identify if the data can be used to fulfill the overall project objectives.

The data validation guidelines adopted are based on data validation guidance documents published by the United States Environmental Protection Agency (US EPA) February 1994. The process involves the checking of analytical procedure compliance and an assessment of the accuracy and precision of analytical data from a range of quality control measurements generated from both the field sampling and analytical programs.

Specific elements that have been checked and assessed for this project include:

- Preservation and storage of samples upon collection and during transport to the ALS Brisbane Laboratory. It should be noted that the International Air Transportation Association (IATA) regulations do not allow sample containers freighted by air to be pre-dosed with acid or caustic preservatives.

- Sample holding times.

- Use of appropriate analytical and field sampling procedures.

- Required limits of reporting.

- Frequency of conducting quality control measurements.

- Laboratory blank results.

- Field duplicate results.

- Laboratory duplicate results.

- Surrogates spike results.

- The occurrence of apparently unusual or anomalous results, e.g., laboratory results that appear to be inconsistent with field observations or measurements.

Samples selected for analysis were received by ALS Brisbane laboratory within the required holding times.

8.1.2 Analytical Data Quality – Field Data Quality

On the basis of the analytical data validation procedure employed, the overall quality of the analytical data produced is considered to be of an acceptable standard for interpretive use.

The breaches in analysis holding times for moisture content for selected soil samples is not considered to affect the interpretative quality of the reported results.

Field duplicates were collected and analysed at the required frequency of one duplicate per twenty primary samples. No rinsate blank samples were collected. No field blank, field spike or trip spike samples were collected and/or analysed as part of this investigation.
Section 8 Analytical Data Validation

No exceedances of soil sample acceptance criteria 30% of Relative Percentage Difference (RPD) occurred.

Data validation summary tables and RPD reports are provided in Appendix D.

8.1.3 Laboratory Quality Control

On the basis of the analytical data validation procedure employed, the overall quality of the analytical data produced is considered to be of an acceptable standard for interpretive use. The following points summarise the findings of the data quality review undertaken:

- **Required Limits of Reporting**
  
  Limits of reporting for the various analyses undertaken were found to be within the appropriate limits, with the exception of samples HA_CRCL02_0.0_10/3/08 and HA_CRQC01_16/3/08 required dilution prior to analysis for PAH/Phenols due to matrix interferences.

- **Laboratory Blank Results**
  
  All laboratory blanks returned results that were below the relevant laboratory limits of reporting for the analytes tested.

- **Laboratory Control Samples**
  
  All laboratory control samples were within the appropriate control limits.

- **Laboratory Duplicate RPDs**
  
  All laboratory duplicate RPDs were within the appropriate LOR based limits.

- **Matrix Spike/Matrix Spike Duplicate (MS/MSD) RPDs**
  
  All laboratory matrix spike/matrix spike duplicates were within the acceptable level of recovery.

- **Surrogates Spike Results**
  
  All surrogate recoveries were generally within the appropriate guideline limits, however several surrogate recoveries had a high bias, which has been interpreted by the laboratory as being a result of matrix interference.

On the basis of the analytical data validation procedure employed, the overall quality of the analytical data produced is considered to be of an acceptable standard for interpretive use.
Section 9 Conclusions

Following the completion of the desktop review of available documents, including historic and current titles, EPA registries, and aerial photographs; a general and targeted site inspection was carried out over the project site as well as interviews with local leaseholders and Peak Downs Mine employees.

Northern Section

The northern section of the project site is located within a currently inactive portion of mining tenement. Following a desktop review, it was identified that the majority of the project site has been vacant grasslands used for cattle grazing with a low potential for contamination. Two inhabited properties were identified within this section of the project site.

Potential sources of contamination may exist, however further investigations are required to confirm the presence, type and extent of any impact. As a result of the potential occurrence of contaminated soil within the project site, it is recommended that further investigations be carried out prior to undertaking earth moving activities in the area. The following areas may require further investigation due to current and past activities:

- Kalari Trucking workshop and yard,
- Cattle yards and local farm shed,
- Possible sawmill location;
- Rifle Range location;
- Homestead and cottage;
- EMR identified site;
- The gravel pit; and
- Any additional sites not identified during this investigation.

It should be noted that this northern section of the project site is situated on a mining lease and the activities listed above are on the whole consistent with those that would be expected to be found on such a lease. It is also expected that these identified areas of potential concern will be able to be managed at the opportune time as the mine develops and excavation of many of these locations occurs.

URS recommends that BMA perform a further investigation to delineate and validate the cattle yard area before any soil is removed. Additionally, URS recommends that BMA locate and assess (and remove to an appropriate disposal facility if required) those soils originally stripped from the yards that have been “temporarily stored” elsewhere.

Southern Section

This southern section of the project site is located within an area of currently active mining. Following a desktop review it was identified that the majority of the project site until the 1980s had been vacant grasslands used for cattle grazing with a low potential for contamination.

The development of the Heyford pit and associated infrastructure in the Peak Downs Mine (including 10, 11, and 12 North pits) did however introduced a number of activities within this southern section with the potential for contamination. In particular, the use of mobile plant over the site, with the potential for unreported fuel spills and leaks, increase the likelihood of potential contamination issues in the area. The following potentially contaminated areas may require further investigation:

- Dragline transformer past and current locations,
- Mobile fuel tanks, past and current locations,
- Un-rehabilitated exploration drill pads; and
Section 9: Conclusions

- Official and unofficial parking areas, waste off-load areas.

It should be noted that as this southern section of the project site is situated on an active mining lease it is expected that these identified areas of potential concern will be able to be managed at the opportune time as the mine develops and excavation of many of these locations occurs. The characterisation of the vertical and lateral extent of contamination at these areas of potential concern should be determined with consideration of the intended land use for the duration of the project (e.g. continuing hydrocarbon storage, being emplaced into a pit or overburden stockpile) and intended land use at end of mine life. Where contamination is identified prior to, or following, disturbance under the proposed mine plan, on-site remedial works should be conducted as required based on the intended final use of the material.

The conclusion and all information in this Report is given strictly in accordance with and subject to the following limitations and recommendations:

a) The Phase One Environmental Site Assessment undertaken to form this conclusion is limited to the scope of work agreed between URS and BHP Billiton – Mitsubishi Alliance as outlined in section 1.3 ("Scope of Works") of this Report.

b) This Report has been prepared for the sole benefit of BHP Billiton – Mitsubishi Alliance and neither the whole nor any part of this Report may be used or relied upon by any party other than BHP Billiton – Mitsubishi Alliance.

c) The investigations carried out for the purposes of the Report have been undertaken, and the Report has been prepared, in accordance with normal prudent practice and by reference to applicable environmental regulatory authority and industry standards, guidelines and assessment criteria in existence at the date of this Report.

d) This Report should be read in full and no excerpts are to be taken as representative of the findings. No responsibility is accepted by URS for use of any part of this Report in any other context.

e) This Report was prepared between April and October 2008 and is based on the conditions encountered on the site and information reviewed during the time of preparation. URS accepts no responsibility for any changes in site conditions or in the information reviewed that have occurred after this period of time.

f) Where this Report indicates that information has been provided to URS by third parties, URS has made no independent verification of this information except as expressly stated in the Report.

g) Given the limited Scope of Works, URS has only assessed the potential for contamination resulting from past and current known uses of the site.

h) Inspections undertaken in respect of this Report are limited to visual inspections only and are constrained by the particular site conditions, such as the location of buildings, services and vegetation.

i) Except as otherwise specifically stated in this Report, URS makes no warranty or representation as to the presence or otherwise of asbestos and/or asbestos containing materials ("ACM") on the site. If fill has been imported on to the site at any time, or if any buildings constructed prior to 1970 have been demolished on the site or materials from such buildings disposed of on the site, the site may contain asbestos or ACM.

j) No investigations have been undertaken into any off-site conditions, or whether any adjoining sites may have been impacted by contamination or other conditions originating from this site.

k) The conclusion set out above is based solely on the information and findings contained in this Report.

l) Except as specifically stated above, URS makes no warranty, statement or representation of any kind concerning the suitability of the site for any purpose or the permissibility of any use, development or re-development of the site.

m) Use, development or re-development of the site for any purpose may require planning and other approvals and, in some cases, environmental regulatory authority and accredited site auditor approvals. URS offers no opinion as to whether the current use has any or all approvals required, is operating in accordance with any approvals, the likelihood of obtaining any approvals, or the conditions and obligations which such approvals may impose, which may include the requirement for additional environmental works.
Section 9 Conclusions

n) URS makes no determination or recommendation regarding a decision to provide or not to provide financing with respect to the site.

o) The ongoing use of the site and/or use of the site for any different purpose may require the owner/user to manage and/or remediate site conditions, such as contamination and other conditions, including but not limited to conditions referred to in this Report.

Requested By: CITEC CONFIRM

Page 1/1
Deed of Grant of Land

Land Act 1962-1986

Elizabeth the Second, by the Grace of God, Queen of Australia, and Her other Realms and Territories, Head of the Commonwealth:

To All to whom these Presents shall come, Greeting:

We, with the advice of the Executive Council of Our State of Queensland, and in pursuance of the provisions of the Land Act 1962-1986,

do hereby Grant in fee simple unto the person described in the Second Schedule hereto,

ALL that Parcel of Land in Our said State described in the First Schedule hereto delineated on plan registered in the Department of Mapping and Surveying and having Catalogue Number as stated in such First Schedule,

SUBJECT TO the Reservations and Conditions hereinafter specified, and such other Reservations and Conditions as may be contained in and declared by the Laws of Our said State,

Specified Reservations:

1. (a) All minerals (as defined by the Mining Act 1966-1983) on and below the surface of the land; and
(b) The right of access for the purpose of searching for and working any mines (as defined by the Mining Act 1966-1983) in any part of the land.
2. (a) All petroleum (as defined by the Petroleum Act 1923-1986) on or below the surface of the land; and
(b) All rights of access for the purposes of searching for and for the operations of obtaining petroleum in any part of the land, and all rights of way for access and for pipelines and other purposes requisite for obtaining and conveying petroleum in the event of petroleum being obtained in any part of the said land.

Specified Conditions:— Subject to the conditions prescribed by Section 147A of the Land Act 1962-1986.

IN TESTIMONY WHEREOF, We have caused this Our Grant to be Sealed with the Seal of Our said State.

WITNESS Our Trusty and Well-beloved His Excellency the Honourable SIR WALTER BENJAMIN CAMPBELL, one of Her Majesty's Counsel learned in the law, Governor in and over the State of Queensland and its Dependencies in the Commonwealth of Australia, at Government House, Brisbane, in Queensland aforesaid, the Twenty-first day of August, in the thirty-fifth year of Our Reign and in the year of Our Lord One thousand nine hundred and eighty-six.

FIRST SCHEDULE—DESCRIPTION OF LAND

Lot 13 on Plan GV225
County GROSVENOR Parish MORANBAH
Area 714.675 HECTARES, exclusive of 2.868 hectares for a surveyed road

SECOND SCHEDULE—GRANTEE

WILLIAM ROBIN MURPHY, ALISON ISOBEL MURPHY as joint tenants inter se, EDWARD THOMAS MURPHY and GLENDA ROBYN ROWE as tenants in common in the shares of one-half, one-fourth and one-fourth respectively.

Deed of Grant of Land
Land Act 1962-1986

Elizabeth the Second, by the Grace of God, Queen of Australia, and Her other Realms and Territories, Head of the Commonwealth:—

To All to whom these Presents shall come, Greeting:

We, with the advice of the Executive Council of Our State of Queensland, and in pursuance of the provisions of the Land Act 1962-1986,

do hereby Grant in fee simple unto the person described in the Second Schedule hereof,

ALL that Parcel of Land in Our said State described in the First Schedule hereof and delineated on plan registered in the Department of Mapping and Surveying and having Catalogue Number as stated in said First Schedule,

SUBJECT TO the Reservations and Conditions hereinafter specified, and such other Reservations and Conditions as may be contained in and declared by the Laws of Our said State.

Specific Reservations:—

1. (a) All minerals (as defined by the Mining Act 1966-1969) on and below the surface of the land; and
   (b) The right of access for the purpose of searching for and working any mines (as defined by the Mining Act 1966-1969) in any part of the land.

2. (a) All petroleum (as defined by the Petroleum Act 1923-1966) on or below the surface of the land; and
   (b) All rights of access for the purposes of searching for and for the operations of obtaining petroleum in any part of the land, and all rights of way for access and for pipes, lines and other purposes requisite for obtaining and conveying petroleum in the event of petroleum being obtained in any part of the said land.

Specific Conditions:— Subject to the conditions prescribed by Section 147A of the Land Act 1962-1986.

IN TESTAMENT WHEREOF, We have caused this Our Grant to be Sealed with the Seal of Our said State.

WITNESS Our Trusty and Well-beloved His Excellency the Honourable Sir WALTER BENJAMIN CAMPBELL, one of Her Majesty's Counsellors learned in the law, Governor in and over the State of Queensland and its Dependencies in the Commonwealth of Australia, at Government House, Brisbane, in Queensland aforesaid, this Twenty-first day of August, in the thirty-fifth year of Our Reign and in the year of Our Lord One thousand nine hundred and eighty-six.

W. J. B. Campbell

COPYRIGHT THE STATE OF QUEENSLAND (NATURAL RESOURCES AND WATER) [2007]
Requested By: CITEC CONFIRM
Acquired by PURCHASE

Whereas in conformity with the Laws and Regulations in force for the alienation of Crown Land in our State of Queensland,

ARTHUR DAVID MUIRHEAD and ADRIENNE KATHLEEN MUIRHEAD, his wife, as tenants in common in equal shares

have become entitled to a Deed of Grant in fee simple of the Land hereinafter described:

NOW KNOW YE, in consideration of the premises and of the sum of TWO HUNDRED DOLLARS

for Us, and on Our behalf, paid into the Office in Brisbane of the Department of Lands or at any District Land Office of Our said State, and in further consideration of the Quit-Rent hereinafter reserved, WE, with the advice of THE EXERCISE COUNCIL of Our said State, have granted, and for Us, Our Heirs and Successors, do hereby Grant unto the said

ARTHUR DAVID MUIRHEAD and ADRIENNE KATHLEEN MUIRHEAD, his wife, as tenants in common in equal shares, their Administrators and Assigns, subject to the Reservations hereinafter mentioned,

All That Parcel of Land in our State, consisting by re measurement

40.16 HECTARES

be the same more or less, situated in the County of GROSVENOR Parish of MORANBAH

PORTION THIRTY-SEVEN, Being land granted under Section 208 of the Land Act 1962-1981

as delineated on plan of Survey catalogue No. Gv.179 deposited in the Department of Mapping and Surveying and as shown edged red on diagram herein with all the Rights and Appurtenances whatsoever therein belonging. To Hold unto the said

ARTHUR DAVID MUIRHEAD and ADRIENNE KATHLEEN MUIRHEAD, his wife, as tenants in common in equal shares, their Administrators and Assigns for ever. Yielding and Paying therefor Yearly unto Us, Our Heirs and Successors, the Quit-Rent of One Penny per year for ever, if demanded: But Subject Nevertheless to the several Conditions and Reservations contained in said and declared by the Land Act 1962-1981, the Mining Act 1968-1990 and the Petroleum Act 1953-1981: AND WE do hereby reserve unto Us, Our Heirs and Successors, all Gold and Minerals (hereinafter termed "Mineral") to have the same meaning as is the Mining Act 1968-1990, on and below the surface of the said Land: AND WE do hereby also reserve unto Us, Our Heirs and Successors, and to such persons as shall from time to time be duly authorized by Us in that behalf, the free right and privilege of access, including ingress, egress and means, into, upon, over, and out of the said Land, for the purpose of searching for or working Gold and Minerals or any of them, or Minerals of Gold and Minerals, or any of them, in any part of the said Land: AND WE do hereby also reserve unto Us, Our Heirs and Successors, all Petroleum (hereinafter termed "Petroleum") to have the same meaning as is the Petroleum Act 1922-1981, on or below the surface of the said Land: AND also all rights of access for the purpose of searching for and for the operation of obtaining Petroleum in any part of the said Land: AND also all right of way for access and for pipe lines and other purposes requisite for obtaining and conveyance Petroleum in the event of Petroleum being obtained in any part of the said Land:

IN TESTIMONY WHEREOF, We have caused this Our Grant to be Sealed with the Seal of Our said State.

WITNESS Our Trusty and Dearbeloved His Excellency Commodore Sir JAMES MAXWELL RAMAY, Knight Commander of the Most Excellent Order of St Michael and St George, Commander of the Most Distinguished Order of the British Empire, to whom has been conferred the Decoration of the Distinguished Service Cross, and Commander in the Royal Australian Navy (Honorary), Governor in and over the State of Queensland and its Dependencies in the Commonwealth of Australia, at Government House, in Queensland aforesaid, this Thirty-first day of May one thousand nine hundred and eighty-two.

Area: 20971.699000 Ha. (SURVEYED)

No Land Description

No Forestry Entitlement Area

Purpose for which granted:
INDUSTRIAL (COAL MINING)

TERM OF LEASE

Term and day of beginning of lease

Term: 31 years commencing on 01/01/1979

Expiring on 31/12/2009
CONDITIONS

C1 The right of resuming the whole or any part of the leased land at any time on giving six (6) months notice and compensating for improvements only shall be reserved to the Crown.

M76 No compensation for improvements or developmental works shall be payable by the Crown at the expiration of the term of the lease, but the Lessees shall have the right to remove movable improvements within a period of three months, provided all moneys due by the Lessees to the Crown on any account whatsoever have been paid.

C170 The lessee shall not at any time destroy any tree upon the leased land without the prior permit in writing of the Land Commissioner or contrary to any of the terms and conditions of such permit.

C173 The lessee shall not interfere with any forest products or remove any quarry material (including any stone, gravel, sand, earth, soil, rock, guano or clay which is not a mineral within the meaning of the Mining Act 1968) or other material upon the leased land without the permission of the Minister except under the authority of and in compliance in every respect with the requirements of a permit, license, agreement or contract granted or made under the Forestry Act 1959.

C5 The lessee shall allow any person authorised under the Forestry Act 1959 access to the leased land for the purpose of cutting and removing timber or removing other forest products, or quarry material, or other material from the leased land.

K1 The lessee shall maintain the leased land free from noxious plants.

E10 The lessee shall pay the cost of any required survey of the leased land.

M76 The Lessees shall use the leased land for Industrial (Coal Mining) purposes.
CONDITIONS

M76 The Lessees shall comply, in all respect, with the conditions of Special Coal Mining Lease No. 210, Clermont Warden's District which are applicable to the area comprised in the leased land.

M76 The leased land shall be used and enjoyed in conjunction with Special Coal Mining Lease No. 210 and shall not be transferred or assigned separately therefrom; in the event of determination of the said Special Coal Mining Lease the subject lease shall be surrendered to the Crown.

M76 Conversion of tenure in terms of the Land Act 1962-1978 will not be allowed.

COPYRIGHT THE STATE OF QUEENSLAND (NATURAL RESOURCES AND WATER) [2007]
Requested By: CITEC CONFIRM
Deed of Grant of Land

Land Act 1962-1987

Elizabeth the Second, by the Grace of God, Queen of Australia, and Her other Realms and Territories, Head of the Commonwealth—

To All to whom these Presents shall come, Greeting:

We, with the advice of the Executive Council of Our State of Queensland, and in pursuance of the provisions of the Land Act 1962-1987
do hereby Grant in fee simple unto the person described in the Second Schedule hereto,

ALL that Parcel of Land in Our said State described in the First Schedule hereto and delineated on plan registered in the Department of Mapping and Surveying and having Catalogue Number as stated in such First Schedule.

SUBJECT TO the Reservations and Conditions hereinafter specified, and such other Reservations and Conditions as may be contained in and declared by the Laws of Our said State.

Specified Reservations—

1. (a) All minerals (as defined by the Mining Act 1969-1964) on and below the surface of the land; and
   (b) The right of access for the purpose of searching for and working any mines (as defined by the Mining Act 1969-1964) in any part of the land.

2. (a) All petroleum (as defined by the Petroleum Act 1923-1934) on or below the surface of the land; and
   (b) All rights of access for the purposes of searching for and for the operations of obtaining petroleum in any part of the land, and all rights of way for access and for pipe-lines and other purposes requisite for obtaining and conveying petroleum in the event of petroleum being obtained in any part of the said land.

Specified Conditions—Subject to the conditions prescribed by Section 147A of the Land Act 1962-1987

IN TESTIMONY WHEREOF, We have caused this Our Grant to be Sealed with the Seal of Our said State.

WITNESS Our Trusty and Well-beloved His Excellency the Honourable Sir WALTER BENJAMIN CAMPBELL, one of Her Majesty’s Council learned in the law, Governor in and over the State of Queensland and its Dependencies in the Commonwealth of Australia, at Government House, Brisbane, in Queensland abovesaid, this twenty-sixth day of November, in the thirty-sixth year of Our Reign and in the year of Our Lord One thousand nine hundred and eighty-seven.

W.B. Campbell

Deed of Grant of Land
Land Act 1962-1986

Elizabeth the Second, by the Grace of God, Queen of Australia, and Her other Realms and Territories, Head of the Commonwealth:

To All to whom these Presents shall come, Greetings:

We, with the advice of the Executive Council of Our State of Queensland, and in pursuance of the provisions of the Land Act 1962-1986

do hereby Grant in fee simple unto the person described in the Second Schedule hereto.

ALL that Parcel of Land in Our said State described in the First Schedule hereto and delineated on plan registered in the Department of Mapping and Surveying and having Catalogue Number as stated in such First Schedule,

SUBJECT TO the Reservations and Conditions hereinafter specified, and such other Reservations and Conditions as may be contained in and declared by the Laws of Our said State.

Specified Reservations.—

1. (a) All minerals (as defined by the Mining Act 1968-1983) on and below the surface of the land; and
(b) The right of access for the purpose of searching for and working any mines (as defined by the Mining Act 1968-1983) in any part of the land.

2. (a) All petroleum (as defined by the Petroleum Act 1923-1986) on or below the surface of the land, and
(b) All rights of access for the purposes of searching for and for the operations of obtaining petroleum in any part of the land, and all rights of way for access and for pipelines and other purposes requisite for obtaining and conveying petroleum in the event of petroleum being obtained in any part of the said land.

Specified Conditions.— Subject to the conditions prescribed by Section 147A of the Land Act 1962-1986.

IN TESTIMONY WHEREOF, We have caused this Our Grant to be Sealed with the Seal of Our said State.

WITNESS Our Trusty and Well-beloved His Excellency the Honourable Sir WALTER BENJAMIN CAMPBELL, one of Her Majesty's Counsel learned in the law, Governor in and over the State of Queensland and its Dependencies in the Commonwealth of Australia, at Government House, Brisbane, in Queensland aforesaid, this Twenty-first day of August, in the thirty-fifth year of Our Reign and in the year of Our Lord One thousand nine hundred and eighty-six.

Lease for Special Purposes, under Section 203 (a) of the Land Act 1962-1978

Elizabeth the Second, by the Grace of God, Queen of Australia, and Her other Realms and Territories, Head of the Commonwealth:

To All to whom these Presents shall come, Greeting:

Whereas UTAH DEVELOPMENT COMPANY, MITUBISHI DEVELOPMENT PTY. LTD., AUSTRALIAN MUTUAL PROVIDENT SOCIETY and UTAH MINING AUSTRALIA LIMITED as tenants in common in the said State, have made application for a lease under the provisions of Section 203 (a) of the Land Act 1962-1978 (hereinafter referred to as “the said Act”) of the Land hereinafter described: AND WHEREAS the Governor of Our State of Queensland, with the advice of the Executive Council thereof, has granted such application, and has agreed to issue a Lease of the said Land in Our name for the term, at the rent, upon and subject to the conditions hereinafter mentioned: Now Know Ye that in consideration of the premises and of the rent, reservations, and conditions hereinafter reserved and contained, We, in pursuance of the said Act DO HEREBY for Us, Our Heirs and Successors, Demise and Lease unto the said UTAH DEVELOPMENT COMPANY, MITUBISHI DEVELOPMENT PTY. LTD., AUSTRALIAN MUTUAL PROVIDENT SOCIETY and UTAH MINING AUSTRALIA LIMITED as tenants in common in such interests as aforesaid

(hereinafter with their Successors in title designated “the Lessees”), and their lawful Assigns, for Industrial (Coal Mining) purposes

All that parcel of Land particularly described in the First Schedule endorsed on these Presents To Hold the same unto the Lessees and their lawful Assigns for and during the term of thirty-one Years to be computed from the First day of January in the year five hundred and seventy-nine with, under, and subject to the terms, conditions, provisions, exceptions, reservations, provisions, penalties, and forfeitures hereinafter particularly mentioned or referred to, or contained in or prescribed by the said Act, and to the conditions, reservations, and provisions in the Mining Act 1968-1976 and the Petroleum Act 1923-1976, or any Regulations made or which may hereafter be made under the aforesaid Acts, or any of them: YIELDING AND PAYING unto Us Our Heirs and Successors, subject to the provisions of the said Act during the said term the yearly rent of One thousand five hundred dollars;

such rent to be paid at the Office in Brisbane of the Department of Lands, or at any District Land Office, in Our said State, or at such other place as may from time to time be appointed by the Governor of Our said State in Council, on or before the First day of January in each and every year of the said term: AND IT IS HEREBY EXPRESSLY DECLARED AND AGREED that the Lessees shall not in any way assign or sublet the said Land, or any part thereof, or grant to any person the right of occupation or tenancy to, over, or upon the said Land, or any part thereof, or of any structure or building erected thereon, without the consent in writing of the Minister for Lands, Forestry and Water Resources for the time being of Our said State, first had and obtained; AND IT IS ALSO DECLARED AND AGREED that these Presents are upon the express condition that the Lessee hereby granted shall be subject to the conditions set forth in the Second Schedule endorsed hereon: And that if the Lessees make default in payment of the rent hereby reserved, or any part thereof, at the times and in the manner herein prescribed, or fail to observe and perform the terms, stipulations, agreements, and conditions herein and in the Second Schedule contained or referred to, or any of them, then, and in such case, this Lease shall be liable to be forfeited. AND WE DO HEREBY RESERVE unto Us, Our Heirs and Successors, the full and free right to take and remove any Indigenous Timber growing thereon, and all other Materials being the natural products of the said Land, or being within, upon, or under the same, which may at any time hereafter be required for the construction or repair of any Public Works: AND ALSO, the right of full and free ingress, egress, and regress, into, upon, over, and out of the said Land and for the several purposes aforesaid: PROVIDED ALWAYS AND WE DO HEREBY RESERVE unto Us, Our Heirs and Successors, all Gold and Minerals (the term “Minerals” to have the same meaning as in the Mining Act 1968-1976),
on and below the surface of the said Land, and all Mines of Gold and Minerals on and below the surface of the said Land: AND WE DO HEREBY ALSO RESERVE unto Us, Our Heirs and Successors, and their assigns as shall from time to time be duly authorised by Us in that behalf, during the term of the said Lease, the free right and privilege of access, including ingress, egress, and regress, into, upon, over, and out of the said Land, for the purpose of searching for or working Gold and Minerals, or any of them, or Mines of Gold and Minerals, or any of them, in any part of the said Land: AND WE DO HEREBY ALSO RESERVE unto Us, Our Heirs and Successors, all Petroleum (the term "Petroleum" to have the same meaning as in the Petroleum Act 1923-1976), on or below the surface of the said Land: AND ALSO all rights of access for the purpose of searching for and for the operations of obtaining Petroleum in any part of the said Land: AND ALSO all rights of way for access and for pipe lines and other purposes requisite for obtaining and conveying Petroleum in the event of Petroleum being obtained in any part of the said Land: AND WE DO FURTHER RESERVE the right of any person duly authorised in that behalf by the Governor of Our said State in Council at all times to go upon the said Land, or any part thereof, for any purpose whatsoever, or to make any survey, inspection, or examination of the same.

IN TESTIMONY WHEREOF, We have caused this Our Lease to be Sealed with the Seal of Our said State.

WITNESS Our Trusty and Well-beloved His Excellency Commodore Sir
JAMES MAXWELL RAMSAY, Knight Commander of the Most Distinguished
Order of Saint Michael and Saint George, Commander of the Most
Excellent Order of the British Empire, upon whom has been conferred
the Decoration of the Distinguished Service Cross, and Commodore in
the Royal Australian Navy (Retired), Governor in and over the State
of Queensland and its Dependencies in the Commonwealth of Australia,
at Government House, Brisbane, in Queensland aforesaid, this

twenty-sixth day of July, in the
twenty-eighth year of Our Reign and in the year of Our Lord
One thousand nine hundred and seventy-nine.

SECOND SCHEDULE

(Conditions)

The right of resuming the whole or any part of the leased land at any time, on giving six months' notice and compensating for improvements only, shall be reserved to the Crown.

No compensation for improvements or developmental works shall be payable by the Crown at the expiration of the term of the lease, but the Lessees shall have the right to remove movable improvements within a period of three months, provided all moneys due by the Lessees to the Crown on any account whatsoever have been paid. However, should the leased land revert to the Crown and be again made available for lease or purchase, the former Lessee or Lessees shall be entitled to receive payment for the value of such improvements or developmental work in accordance with the principles set out in the said Act.

The Lessees shall not at any time destroy any tree upon the leased land without the prior permit in writing of the Land Commissioner or contrary to any of the terms and conditions of such permit.

The Lessees shall not interfere with any forest products or remove any quarry material (including any stone, gravel, sand, earth, soil, rock, guano or clay which is not a mineral within the meaning of the Mining Act 1966–1976) or other material upon the leased land without the permission of the Minister except under the authority of and in compliance in every respect with the requirements of a permit, license, agreement or contract granted or made under the Forestry Act 1959–1976.

The Lessees shall allow any person authorised under the Forestry Act 1959–1976 access to the leased land for the purpose of cutting and removing timber or removing other forest products, or quarry material, or other material from the leased land.

The Lessees shall maintain the leased land free from noxious plants.

The Lessees shall pay the cost of any required survey of the leased land.

1. The Lessees shall use the leased land for Industrial (Coal Mining) purposes.

2. The Lessees shall comply, in all respect, with the conditions of Special Coal Mining Lease No. 210, Clermont Warden's District which are applicable to the area comprised in the leased land.

3. The leased land shall be used and enjoyed in conjunction with Special Coal Mining Lease No. 210 and shall not be transferred or assigned separately therefrom; in the event of determination of the said Special Coal Mining Lease the subject lease shall be surrendered to the Crown.

THE within described holding derives a benefit from each of the servient tenements as were created pursuant to registered in gross.

Transfer of the Lessee's Interest in the within described holding to UTAH DEVELOPMENT COMPANY, MITSUBISHI DEVELOPMENT PTY. LTD., AUSTRALIAN MINERAL PROVIDENT SOCIETY, UMAL CONSOLIDATED LIMITED, PARTNERSHIP MINING LIMITED, BELL COAL PTY. LTD., GENERAL ELECTRIC MINERALS INC., BOWEN BASIN MINERALS INC., BURRUM MINERALS INC., QCT INVESTMENT PTY. LTD., QCT MINING PTY. EMR RESULT

The above site IS included on the Environmental Management Register.
Lot: 10  Plan: SP137499
Address: DYSART ROAD
DYSART QLD 4745

The site has been subject to the following Notifiable Activity pursuant to section 374 of the Environmental Protection Act 1994.
CHEMICAL MANUFACTURE OR FORMULATION - manufacturing, blending, mixing or formulating chemicals if:
(a) the chemicals are designated dangerous goods under the dangerous goods code; and
(b) the facility used to manufacture, blend, mix or formulate the chemicals has a design production capacity of more than 1 t per week.
CHEMICAL STORAGE - (other than petroleum products or oil under item 29) - storing more than 10 t of chemicals (other than compressed or liquefied gases) that are dangerous goods under the dangerous goods code.
EXPLOSIVES PRODUCTION OR STORAGE - operating a factory under the Explosives Act 1952.
WASTE STORAGE, TREATMENT OR DISPOSAL - storing, treating, reprocessing or disposing of regulated waste (other than at the place it is generated), including operating a nightsoil disposal site or sewage treatment plant where the site or plant has a design capacity that is more than the equivalent of 50,000 persons having sludge drying beds or on-site disposal facilities.
PETROLEUM PRODUCT OR OIL STORAGE - storing petroleum products or oil -
(a) in underground tanks with more than 200L capacity; or
(b) in above ground tanks with -
(i) for petroleum products or oil in class 3 in packaging groups 1 and 2 of the dangerous goods code - more than 2,500L capacity; or
(ii) for petroleum products or oil in class 3 in packaging groups 3 of the dangerous goods code - more than 5,000L capacity; or
(iii) for petroleum products that are combustible liquids in class C1 or C2 in Australian Standard AS1940, 'The storage and handling of flammable and combustible liquids' published by Standards Australia - more than 25,000L capacity.
MINE WASTES -
(a) storing hazardous mine or exploration wastes, including, for example, tailings dams, overburden or waste rock dumps containing hazardous contaminants; or
(b) exploring for, or mining or processing, minerals in a way that exposes faces, or releases groundwater, containing hazardous contaminants.

While sites are listed on the EMR using the lot and plan description, a mining lease may affect only a limited area of the lot. In many instances with rural properties, only a small area may be potentially affected by the mining activities and the ongoing landuse is unaffected. More detailed information relating to the location of the mining activities may be held by the EPA or the Department of Natural Resources and Mines.

CLR RESULT

The above site is NOT included on the Contaminated Land Register.

NATA Accredited Laboratory 825
This document is issued in accordance with NATA accreditation requirements.
Accredited for compliance with ISO/IEC 17025.
General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been preformed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

Key:
- CAS Number = Chemistry Abstract Services number
- LOR = Limit of reporting
- ^ = This result is computed from individual analyte detections at or above the level of reporting

- EG005T (Total Metals): EB0803650-058 matrix spike failed due to sample matrix interference.
- EG005T (Total Metals): EB0803809-003 duplicate failed due to sample heterogeneity.
- PAH/Phenols: Samples [HA_CRCL02_0.0_10/3/08] and [HA_CRQC01_16/3/08] required dilution prior to analysis due to matrix interferences. LOR values have been adjusted accordingly. Surrogate recovery not determined.

**Date Samples Received**: 20-MAR-2008

**Issue Date**: 01-APR-2008

**No. of samples received**: 5

**No. of samples analysed**: 5

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Quality Control Report contains the following information:
- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

**NATA Accredited Laboratory 825**
This document is issued in accordance with NATA accreditation requirements. Accredited for compliance with ISO/IEC 17025.

**Signatories**
This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In-house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key:
- Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
- CAS Number = Chemistry Abstract Services number
- LOR = Limit of reporting
- RPD = Relative Percentage Difference
- # = Indicates failed QC
## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Method Blank (MB) Report

Laboratory Control Spike (LCS) Report

Work Order: EB0803692
Client: URS AUSTRALIA PTY LTD (QLD)
Project: 42626158
### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Interpretive Quality Control Report contains the following information:

- Analysis Holding Time Compliance
- Quality Control Parameter Frequency Compliance
- Brief Method Summaries
- Summary of Outliers
Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non-volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(where) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

### Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<table>
<thead>

Summary of Outliers

Outliers: Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW 846 or ALS-QWI/EN/38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

- For all matrices, no Method Blank value outliers occur.
- For all matrices, no Duplicate outliers occur.
- For all matrices, no Laboratory Control outliers occur.
- For all matrices, no Matrix Spike outliers occur.

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.
General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been preformed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

Key:
- CAS Number = Chemistry Abstract Services number
- LOR = Limit of reporting
- ^ = This result is computed from individual analyte detections at or above the level of reporting

- PCB: Sample required dilution prior to analysis due to matrix interferences. LOR values have been adjusted accordingly.

Subject: FW: rebatch for PCB;s out of EB0803692

Phil

As per a client request can you rebatch #3 from EB0803692 for PCBs due this coming Friday.

Let me know the WO number and as soon as I have written confirmation from the client I will send it through (please rebatch using this e-mail as the CoC in the first instance).

thanks

Subject: rebatch for PCB;s out of EB0803692

Chris Morrison at URS has just advised me that a fax was sent previously (and call made) to ask for a rebatch, that doesn't appear to have been done. PCB's are Urgently required on samples 2 - 4 from EB0803692.

Holding times have now expired so he asked if we could do something with the already extracted sample.

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.
General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key:
- Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
- CAS Number = Chemistry Abstract Services number
- LOR = Limit of reporting
- RPD = Relative Percentage Difference
- # = Indicates failed QC
Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR:- No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:- 0% - 20%.

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: SOIL
Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- No Matrix Spike (MS) Results are required to be reported.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Interpretive Quality Control Report contains the following information:

- Analysis Holding Time Compliance
- Quality Control Parameter Frequency Compliance
- Brief Method Summaries
- Summary of Outliers
### Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided on the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non-volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(where) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

**Brief Method Summaries**

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Summary of Outliers

Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QWI/EN/38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

- For all matrices, no Method Blank value outliers occur.
- For all matrices, no Duplicate outliers occur.
- For all matrices, no Laboratory Control outliers occur.
- For all matrices, no Matrix Spike outliers occur.
