

Disciplined execution of our strategy

Full year ended 30 June 2023

Western Australia Iron Ore

Disclaimer

The information in this presentation is current as at 22 August 2023. It is in summary form and is not necessarily complete. It should be read together with the BHP Results for the full year ended 30 June 2023.

Forward-looking statements

This presentation contains forward-looking statements, which involve risks and uncertainties. Forward-looking statements include all statements other than statements of historical or present facts, including: statements regarding: trends in commodity prices and currency exchange rates; demand for commodities; global market conditions; guidance; reserves and resources and production forecasts; expectations, plans, strategies and objectives of management; our expectations, commitments, targets, goals and objectives with respect to social value or sustainability; climate scenarios; approval of certain projects and consummation of certain transactions; closure, divestment, acquisition or integration of certain assets, operations or facilities (including associated costs or benefits); anticipated production or construction commencement dates; capital expenditure or costs and scheduling; operating costs, and supply of materials and skilled employees; anticipated productive lives of projects, mines and facilities; the availability, implementation and adoption of new technologies; provisions and contingent liabilities; and tax, legal and other regulatory developments.

Forward-looking statements may be identified by the use of terminology, including, but not limited to, 'intend', 'aim', 'ambition', 'aspiration', 'goal', 'target', 'prospect', 'project', 'see', 'anticipate', 'estimate', 'plan', 'objective', 'believe', 'expect', 'commit', 'may', 'should', 'need', 'must', 'will', 'would', 'continue', 'forecast', 'guidance', 'outlook', 'trend' or similar words. These statements discuss future expectations or performance, or provide other forward-looking information.

The forward-looking statements are based on management's expectations and reflect judgements, assumptions, estimates and other information available as at the date made. BHP cautions against reliance on any forward-looking statements or guidance.

Additionally, forward-looking statements in this presentation do not represent guarantees or predictions of future financial or operational performance, and involve known and unknown risks, uncertainties and other factors, many of which are beyond our control, and which may cause actual results to differ materially from those expressed in the statements contained in this presentation.

For example, our future revenues from our assets, projects or mines described in this presentation will be based, in part, upon the market price of the commodities produced, which may vary significantly from current levels. These variations, if materially adverse, may affect the timing or the feasibility of the development of a particular project, the expansion of certain facilities or mines, or the continuation of existing assets.

In addition, there are limitations with scenario analysis and it is difficult to predict which, if any, of the scenarios might eventuate. Scenario analysis is not an indication of probable outcomes and relies on assumptions that may or may not prove to be correct or eventuate.

Other factors that may affect the actual construction or production commencement dates, revenues, costs or production output and anticipated lives of assets, mines or facilities include our ability to profitably produce and deliver the products extracted to applicable markets; the impact of economic and geopolitical factors, including foreign currency exchange rates on the market prices of the commodities we produce and competition in the markets in which we operate; activities of government authorities in the countries where we sell our products and in the countries where we are exploring or developing projects, facilities or mines, including increases in taxes and royalties or implementation of trade or export restrictions; changes in environmental and other regulations; political or geopolitical uncertainty; labour unrest; and other factors identified in the risk factors discussed in section 8.1 of the Operating and Financial Review (OFR) in the BHP Annual Report 2023 and BHP's filings with the U.S. Securities and Exchange Commission (the 'SEC') (including in Annual Reports on Form 20-F) which are available on the SEC's website at www.sec.gov.

Except as required by applicable regulations or by law, BHP does not undertake to publicly update or review any forward-looking statements, whether as a result of new information or future events. Past performance cannot be relied on as a guide to future performance.

Presentation of data

Unless specified otherwise: variance analysis relates to the relative performance of BHP and/or its operations during the full year ended 30 June 2023 compared with the full year ended 30 June 2022; operations includes operated assets and non-operated assets; total operations refers to the combination of continuing and discontinued operations; continuing operations refers to data presented excluding the impacts of Onshore US from the 2017 financial year onwards and excluding Petroleum from the 2021 financial year onwards; copper equivalent production based on 2023 financial year average realised prices; references to Underlying EBITDA margin exclude third party trading activities; data from subsidiaries are shown on a 100% basis and data from equity accounted investments and other operations is presented, with the exception of net operating assets, reflecting BHP's share; medium term refers to a five-year horizon, unless otherwise noted. Throughout this presentation, production volumes and financials for the operations from BHP's acquisition of OZ Minerals Limited (OZL) are for the period of 1 May to 30 June 2023, whilst the acquisition completion date was 2 May 2023. Unless expressly stated, information and data in this presentation related to BHP's social value or sustainability position or performance does not reflect BHP's acquisition of OZL. Due to the inherent uncertainty and limitations in measuring greenhouse gas (GHG) emissions under the calculation methodologies used in the preparation of such data, all GHG emissions data or references to GHG emissions (including ratios or percentages) in this presentation are estimates. Emissions calculation and reporting methodologies may change or be progressively refined over time resulting in the need to restate previously reported data. Numbers presented may not add up precisely to the totals provided due to rounding. All footnote content (except in the Annexures) is contained on slide 21.

Non-IFRS information

We use various Non-IFRS information to reflect our underlying performance. For further information, the reconciliation of non-IFRS financial information to our statutory measures, reasons for usefulness and calculation methodology, please refer to section 10 'Non-IFRS financial information' in the BHP Annual Report 2023.

No offer of securities

Nothing in this presentation should be construed as either an offer or a solicitation of an offer to buy or sell any securities, or a solicitation of any vote or approval, in any jurisdiction, or be treated or relied upon as a recommendation or advice by BHP. No offer of securities shall be made in the United States absent registration under the U.S. Securities Act of 1933, as amended, or pursuant to an exemption from, or in a transaction not subject to, such registration requirements.

Reliance on third party information

The views expressed in this presentation contain information that has been derived from publicly available sources that have not been independently verified. No representation or warranty is made as to the accuracy, completeness or reliability of the information. This presentation should not be relied upon as a recommendation or forecast by BHP.

BHP and its subsidiaries

In this presentation, the terms 'BHP', the 'Company', the 'Group', 'BHP Group', 'our business', 'organisation', 'we', 'us', 'our' and ourselves' refer to BHP Group Limited and, except where the context otherwise requires, our subsidiaries. Refer to note 30 'Subsidiaries' of the Financial Statements in the BHP Annual Report 2023 for a list of our significant subsidiaries. Those terms do not include non-operated assets. This presentation covers BHP's functions and assets (including those under exploration, projects in development or execution phases, sites and closed operations) that have been wholly owned and/or operated by BHP or that have been owned as a joint venture¹ operated by BHP (referred to in this presentation as 'operated assets' or 'operations') during the period from 1 July 2022 to 30 June 2023.

BHP also holds interests in assets that are owned as a joint venture but not operated by BHP (referred to in this presentation as 'non-operated joint ventures' or 'non-operated assets'). Notwithstanding that this presentation may include production, financial and other information from non-operated assets, non-operated assets are not included in the BHP Group and, as a result, statements regarding our operations, assets and values apply only to our operated assets unless stated otherwise.

1. References in this presentation to a 'joint venture' are used for convenience to collectively describe assets that are not wholly owned by BHP. Such references are not intended to characterise the legal relationship between the owners of the asset.

Performance summary

Full year ended 30 June 2023

Mike Henry

Chief Executive Officer

Olympic Dam

Disciplined execution of our strategy creates value

Delivered robust results in the 2023 financial year

Tragically, two fatalities in H2

Solid operating performance, with records at WAIO, Olympic Dam and Spence

Strong financial results and returns

OZ Minerals acquisition completed, integration underway

Growth options in execution and further being generated

Note: WAIO – Western Australia Iron Ore.

FY23 social value highlights

Delivering on our framework with tangible results

Our social value framework					
 Decarbonisation	 Healthy environment	 Indigenous partnerships	 Safe, inclusive and future ready workforce	 Thriving, empowered communities	 Responsible supply chains
Operational GHG emissions	Natural Capital Accounting (NCA)	Indigenous procurement	Female representation	Total economic contribution³	Standards & certifications
↓ 11% from FY22, on track to meet our FY30 target ¹	Pilot case study a mining industry first on NCA at our Beenup closed site	~US\$333 m ↑ 122% YoY	> 35% female representation across the Group ↑ 2.9 % points YoY ²	US\$54 bn with ~US\$14 bn paid to governments in the year	BHP Responsible Minerals Program a fit for purpose due diligence program for our supply chain aligned with OECD Guidance ⁴

Note: Excludes OZ Minerals operations and functions.

The background of the slide is a photograph of an industrial facility, likely a refinery or chemical plant, under a bright blue sky with scattered white clouds. A large yellow tower crane is prominent on the left side of the image. In the foreground, there is a complex network of pipes, valves, and industrial equipment. In the distance, a range of mountains is visible under the sky.

BHP

Financial results

Full year ended 30 June 2023

David Lamont
Chief Financial Officer

Escondida

Financial performance

Reliable operating performance delivers strong results

Summary financials

- Underlying attributable profit of **US\$13.4 bn** at **28.8% ROCE**
- Underlying EBITDA of **US\$28.0 bn**
 - Underlying EBITDA margin of **54%**
- Adjusted effective tax rate of **30.9%**⁵
 - Adjusted effective tax rate including royalties of **41.3%**⁵
- Full year dividends of **170 US cents** per share, a 64% payout ratio⁶
 - Final dividend of 80 US cents per share
- Net operating cash flow of **US\$18.7 bn**
- **US\$13.1 bn** of investments in the period:
 - **US\$7.1 bn** of capital and exploration expenditure
 - **US\$5.9 bn** acquisition of OZ Minerals in May 2023
- Free cash flow of **US\$5.6 bn** vs. dividends declared of **US\$8.6 bn**
- Net debt of **US\$11.2 bn** (FY22: US\$0.3 bn), includes **US\$7.0 bn** relating to the acquisition of OZ Minerals⁷
 - Expected to stay at upper end of US\$5 -15 bn target range in the near term

Income statement

(US\$ bn, Underlying)

Group earnings waterfall

Lower prices and external inflation the biggest drivers

Underlying earnings variance and drivers (US\$ bn)

Note: US\$1.4 bn ceased and sold operations impact¹¹, predominantly the contribution of BHP Mitsui Coal (BMC) prior to divestment of our 80% interest on 3 May 2022.

Consistent performance

Continue to deliver strong margins and a consistently high baseline of cash flow

Margins ahead of peers through commodity cycles^{16,17}

(Underlying EBITDA margin, %)

(Bloomberg commodity index, rebased)

Consistently delivered >US\$15 bn in net operating cash flow¹⁷⁽ⁱ⁾

(US\$ bn)

(i) Presented on a total operations basis.

Segment performance

Iron ore

Production:	257 Mt ▲
Average realised price:	US\$92.54/wmt ▼
EBITDA margin:	67%
WAIO unit cost ¹⁸ :	US\$17.79/t
WAIO C1 unit cost ¹⁹ :	US\$15.86/t

Nickel

Production:	80 kt ▲
Average realised price:	US\$24,021/t ▲
EBITDA margin:	8%

- Impacted by inventory draw downs, cost inflation and lower realised prices for intermediate products in sales mix

Copper

Production:	1,717 kt ▲
Average realised price:	US\$3.65/lb ▼
EBITDA margin:	47%
Escondida unit cost ¹⁸ :	US\$1.40/lb

Potash

- Jansen Stage 1 continues to be on time and on budget
- Stage 1: 26% complete
- US\$3.1 bn in contracts awarded to date

Metallurgical coal

BMA production:	29 Mt –
Average realised price:	US\$271.05/t ▼
BMA EBITDA margin:	42%
BMA unit cost ¹⁸ :	US\$96.46/t

Energy coal²⁰

NSWEC production:	14.2 Mt ▲
Average realised price - export:	US\$236.51/t ▲
NSWEC EBITDA margin:	56%
NSWEC unit cost ¹⁸ :	US\$82.37/t

Note: WAIO – Western Australia Iron Ore; BMA – BHP Mitsubishi Alliance; NSWEC – New South Wales Energy Coal. Arrow indicates movement relative to FY22.

Capital spend increasing to deliver growth

Medium term capital ~US\$11 bn on average with flexibility to adjust spend for value

Increasing spend on future-facing commodities to ~70%²¹

(US\$ bn, nominal)

(capital in future-facing commodities, %)

Major capital in **future-facing commodities** includes:

- In execution: Jansen Stage 1 and West Musgrave
- Projects under study: Jansen Stage 2, options at Copper South Australia and in Chilean copper

Steelmaking materials major capital includes WAIO growth to >305 Mtpa, and in medium term initial spend on 330 Mtpa

Exploration capital focused on copper and nickel

Improvement capital includes projects that enable improved productivity, quality, facilities and organisational culture

Maintenance and decarbonisation capital includes decarbonisation spend of ~US\$4 bn through to FY30

Note: Medium term refers to FY26 – FY28 average. FFC – future-facing commodities. Major capital represents projects >US\$250 m.

Business update

Full year ended 30 June 2023

Mike Henry
Chief Executive Officer

Portfolio positively leveraged to megatrends

Built to compete in a complex but opportunity-rich environment

BHP
Portfolio

Copper
Largest mineral
resources²²

Nickel
Second largest
sulphide resources²³

Iron Ore
Lowest cost iron ore
producer²⁴

Metallurgical Coal
Leading met coal
supplier

Potash
Large-scale resource supports
up to 100 years of operation²⁵

TRADITIONAL DEMAND

Attractive fundamentals

Population growth
Urbanisation
Industrialisation
Living standards
Capital stock turnover

DECARBONISATION

Demand amplification,
rising material intensity

Climate-positive land use
Decarbonising power
Electrifying transport
Electrifying buildings
Decarbonising industry

COST COMPETITIVENESS

Steeper cost curves, margin
expansion for best operators

End-to-end logistics
Economies of scale
Operational decarbonisation
Operational productivity
Managing labour challenges

SUPPLY HEADWINDS

Tighter balances,
durable inducement pricing

Lack of new discoveries
Changing societal expectations
Geological inflation
Regulatory uncertainty
Geopolitical risk

Growing value over multiple time horizons

A growing production base with multiple studies underway providing significant longer term optionality

A strong pipeline of growth under study and in execution ...

Illustrative timeline

Productivity initiatives

Major projects – medium term

Jansen Stage 1

West Musgrave²⁷

WAIO growth to >305 Mtpa

Delivery of studies – longer term

Jansen Stage 2

WAIO growth to 330 Mtpa

Chilean copper brownfield options

Copper South Australia growth options²⁸

— Studies — Potential FID — Execution — Targeted first production

Note: FID - Final investment decision.

Financial results

22 August 2023

... with additional opportunities ...

-  Jansen Stages 3 & 4
-  Antamina life extension
-  Resolution
-  Nickel West expansion
-  Early-stage entry investments

... and creation of more longer term options

-  **BHP** Metals Exploration
-  **BHP** Xplor
-  **BHP** Ventures

Opportunities from the OZ Minerals acquisition

Developing a new copper province with significant synergy potential

OZ Minerals acquisition

- Exposure to future-facing commodities in well-understood jurisdictions
- Near term synergies delivered, additional opportunities in the short and medium term
- Integrating 'best of both' culture, including project development agility

Copper province

- Proximity of assets creates synergy potential:
 - Olympic Dam: Record copper, gold and silver production in FY23
 - Prominent Hill: 13 year mine life with life extension options
 - Carrapateena: Growth potential from FY29 via block cave expansion
- Exploration at Oak Dam and Olympic Dam to test extent of mineralisation
- Assessing potential pathway to >500 ktpa, including through expansion with a two-stage smelter²⁹

Adding nickel options

- Growing nickel sulphide resource base
- West Musgrave project progressing including optimal integration into Nickel West
- Aim to support increase in equity feed at the Nickel West smelter

Copper province in South Australia

Nickel in Western Australia

Near term opportunities to deliver value

Early integration and productivity opportunities: >US\$20 m per annum synergies already achieved

Synergies of >US\$50 m per annum from the OZ Minerals acquisition expected to be delivered by the end of FY24

Operations

- Optimisation of mine plans and growth projects
- Benefits from integrated development plans
- Portion of Prominent Hill concentrate treated at Olympic Dam from Q1 FY24: capture value from processing

Procurement

- Integrated South Australian supply chain
- Reduction in working capital from shared inventory
- Procurement cost savings from BHP network, shared transport and logistics

Corporate

- Removal of duplicate corporate activities (e.g. ASX listing / compliance)
- Streamlining of back-office functions
- Rationalisation of physical property and insurance premiums

Unlocking value from developing a new copper province

Regional processing model expected to provide scale and growth; assessing potential pathway to >500 ktpa

Assessing potential pathway to >500 ktpa²⁹ ...

(Copper South Australia production, ktpa)

Financial results
22 August 2023

... to release significant value

- Ramp up of Carrapateena Block Cave 1 expansion from FY28 plus Prominent Hill Wira Shaft productivity improvements from FY26
- Further growth potential from exploration at Oak Dam and extensions at depth at Olympic Dam
- Enables a larger expansion with a two-stage smelter to de-constrain province
- Assessing potential for 0.8 Mt to 1.7 Mt smelting capacity range (from 0.5 Mt today)
 - Regional optionality and concentrate feed source blending to optimise value chain
 - Matches the smelter technology to the core mineralogy in the province
 - Economies of scale from larger capacity

Illustrative timeline

Defining the path for growth in the Americas

Studies progressing on options to grow potash volumes and offset longer term grade decline in copper

Jansen Stage 2 could double potash volumes

- Stage 2 on accelerated timeline to maximise optionality on potential sanction
 - Feasibility study expected to be completed in FY24
 - Project would add ~4 Mtpa of production to the ~4.35 Mtpa of Stage 1
 - Earliest potential FID date in FY24 and potential for first production in FY29 if sanctioned
 - Expected lower capital intensity ~US\$1,000-1,200/t³¹ vs. Stage 1

Unlocking resource and latent capacity in Chilean copper

- Studies across Escondida, Spence and Cerro Colorado
 - Potential for new concentrator to replace Los Colorados at Escondida
 - Assessing sulphide leaching for application across all Chilean assets
 - Five leaching technologies under study or execution, trials aiming to unlock both resource and latent capacity
 - BHP designed leaching technology Full SaL deployed at Spence, on track to be implemented at Escondida

Investment proposition

Attractive returns underpinned by operational excellence, capital allocation discipline and social value commitment

Operational excellence

World class assets

Differentiated culture and capability

Agile decision making and strategic flexibility

Disciplined capital allocation

Strong balance sheet

Capital Allocation Framework

A framework for growth with an active pursuit of opportunities

Value and returns

Commitment to Social Value and sustainability

Increasing exposure to future-facing commodities

Resilience through the cycle

BHP

Footnotes

1. Slide 5: For our baseline year of FY20, our operational GHG emissions were 14.5 Mt CO₂-e, adjusted for discontinued operations (Onshore US assets and Petroleum) and the divestment of BMC, and for methodological changes (use of Intergovernmental Panel on Climate Change Assessment Report 5 AR5 Global Warming Potentials and move to facility-specific emissions calculation methodology for fugitives at Caval Ridge). These adjustments have also been applied to the GHG emissions figures for subsequent years to aid comparability. The use of carbon credits will be governed by BHP's approach to carbon offsetting described at bhp.com/climate.
2. Slide 5: Female employee representation as at 30 June 2023.
3. Slide 5: Total economic contribution includes contribution to suppliers, wages and benefits for employees, dividends, taxes, royalties and voluntary social investment. For more information refer to the BHP Economic Contribution Report 2023.
4. Slide 5: For further information refer to [BHP Responsible Minerals Program](#).
5. Slide 7: Adjusted effective tax rate and Adjusted effective tax rate including royalties: excludes the influence of exchange rate movements and exceptional items.
6. Slide 7: Dividend per share refers to cash dividends. Payout ratio on underlying attributable profit.
7. Slide 7: US\$7.0 bn net debt impact from OZ Minerals purchase includes US\$5.9 bn acquisition cost and US\$1.1 bn assumption of OZ Minerals interest bearing liabilities.
8. Slide 7: Operating costs net of other income.
9. Slide 7 and 8: D&A represents depreciation and amortisation expense and net impairments.
10. Slide 7: Taxation: includes foreign exchange movements in tax expense.
11. Slide 8: Total FY22 underlying EBITDA (on a continuing operations basis) of US\$40.6 bn adjusted for US\$1.4 bn ceased and sold operations impact. This is predominantly the contribution from BMC prior to divestment of our 80% interest in BMC to Stanmore SMC Holdings Pty Ltd, a wholly owned entity of Stanmore Resources Limited, on 3 May 2022.
12. Slide 8: Price: net of price-linked costs.
13. Slide 8: Inflation: includes CPI increases across the cost base, and price increases for consumable costs including diesel and explosives.
14. Slide 8: CPI is exclusive of any CPI relating to diesel, explosives and other consumable materials.
15. Slide 8: Other includes US\$411 m of one-off items, including OZ Minerals transactions costs (US\$131 m) and adjustment for employee allowances and entitlements in FY23 (US\$280 m). Other also includes US\$414 m impact of lower recovery of freight costs caused by movements in the Baltic Dry index on continuous voyage charters.
16. Slide 9: Bloomberg commodity index (Source: Bloomberg, BCOM Index) as at the end of each quarter, rebased to BHP FY10 EBITDA margin. BHP FY23 underlying EBITDA margin (excluding third party products). Peer data compiled from publicly available information (e.g. company reports). Peers include: Anglo American, Glencore (exc. Marketing), Rio Tinto, Vale.
17. Slide 9: BHP information related to periods prior to FY20 are as reported and have not been restated for IFRS5 Non-current Assets Held for Sale and Discontinued Operations. FY11 and FY10 have also not been restated for other accounting standard changes.
18. Slide 10: Average realised exchange rates for FY23 of AUD/USD 0.67 (FY23 guidance rate AUD/USD 0.72) and USD/CLP 864 (FY23 guidance rate USD/CLP 830).
19. Slide 10: WAIO C1 cost: excludes royalties (government and third party royalties), net inventory movements, depletion of production stripping, exploration expenses, marketing purchases, demurrage, exchange rate gains/losses, and other income. There may be differences in the manner that third parties calculate or report unit costs data compared to BHP, which means third party data may not be comparable with our data.
20. Slide 10: Total revenue from thermal coal sales, including BMA and NSWEC, was US\$3,528 m (FY22: US\$3,559 m).
21. Slide 11: Medium term capital and exploration expenditure refers to FY26 – FY28 average. Major capital represents projects >US\$250 m.
22. Slide 13: Largest copper mineral resources on a contained metal basis, equity share. Peers include: Anglo American, Antofagasta, Codelco, First Quantum Minerals, Freeport, Glencore, Rio Tinto, Southern Copper and Teck. Source peers: Wood Mackenzie Ltd, Q2 2023. Source BHP data: BHP Annual Report 2023.
23. Slide 13: Second largest nickel sulphide resources on a contained metal basis, equity share. Source peers: MinEx Consulting Global Ni Database, July 2022. Source BHP data: BHP Annual Report 2023.
24. Slide 13: Based on published unit costs by major iron ore producers, as reported at 30 June 2023. There may be differences in the manner that third parties calculate or report unit costs data compared to BHP, which means third party data may not be comparable with our data.
25. Slide 13: Based on a Reserve life of 94 years as reported in BHP's 17 August 2021 news release, available to view on www.bhp.com.
26. Slide 14 and 18: Represents FY30 and the proceeding decade.
27. Slide 14: The West Musgrave project is currently under review with the start of the targeted first production range based on the range previously disclosed by OZ Minerals (H2 CY25).
28. Slide 14: Timing of Copper South Australia growth options are aligned and subject to approval of the introduction of two-stage smelting at Olympic Dam.
29. Slide 15 and 17: Represents our current aspiration for Copper South Australia, and not intended to be a projection, forecast or production target. Includes potential increases in production rates, as well as potential impacts from our exploration program and the recent OZ Minerals acquisition including Ore Reserves and Mineral Resources (refer to slide 30 "Competent Person Statement – Copper Mineral Resources").
30. Slide 17: Carrapateena Block Cave production representative of Mine Ore tonnes ramp-up.
31. Slide 18: Expected capital intensity Jansen Stage 2, US\$/product tonne, Real 1 July 2023.

Appendix

Slide 24: Future GHG emissions estimates are based on latest annual business plans. Excludes acquired OZ Minerals assets and plans. FY20 to FY22 GHG emissions data has been adjusted for methodology changes and divestments; for more information refer to Metrics, targets and goals, in the Annual Report OFR 6.12. 'Decarbonisation pathway' represents planned decarbonisation activities to reach BHP's operational GHG emissions target and goal. 'Uncertainty range' refers to higher-risk options currently identified that may enable faster or more substantive decarbonisation, but which currently have a relatively low Technology Readiness Level, higher operational integration risk and/or are not yet commercially available and includes project that may require changes to recognition of carbon sequestration such as mineral carbonation. 'BHP's net zero trajectory' refers to a hypothetical straight line between our FY20 baseline and FY30 medium term target, and another hypothetical straight line between our FY30 medium term target and CY50 long term goal. 'Negative GHG emissions solutions' include carbon credits (avoidance, reductions or removals) or other technologies that result in emission reductions. This shows the requirement in order to reach net zero if decarbonisation at the lower line of the 'Uncertainty range' were achieved (but does not reflect probability). 'Fugitive methane and other sources' includes (as part of 'other sources') other feedstocks and heat sources, such as coal, coke, fuel oil and LPG, and use of self-generated carbon credits. GHG emissions calculation methodology changes may affect the information presented in these charts. 'Fugitive methane and other sources' is estimated in accordance with the Australian National Greenhouse and Energy Reporting measurement methodology and does not reflect the tendency for methane density to increase as coal mines deepen, due to current uncertainty with respect to future opportunities to manage methane at our BMA mines. Forecast information is subject to change due to technical, operational, or commercial risks that may impact future outcomes.

Appendix

Safety and social value indicators

We continue to emphasise the safety culture that must be present every day to eliminate fatalities and serious injuries at BHP

Key safety indicators ¹	FY23	FY22	Target/Goal
Fatalities	2	0	Zero work-related fatalities
High Potential Injury (HPI) frequency ³	0.18	0.14	Year-on-year improvement of HPI frequency
Total Recordable Injury Frequency (TRIF) ³	4.5	4.0	Year-on-year improvement in TRIF

Social value: key indicators scorecard ^{1,2}		FY23	FY22	Target/Goal
Operational greenhouse gas (GHG) emissions ⁴ (Mt CO ₂ -e)		9.8	11.0	Reduce operational GHG emissions by at least 30 per cent from FY20 levels by FY30
Value chain emissions: Financial value committed in steelmaking partnerships and ventures to date (US\$ m)		114	90	Steelmaking: 2030 goal to support industry to develop technologies and pathways capable of 30 per cent GHG emissions intensity reduction in integrated steelmaking, with widespread adoption expected post-2030
Value chain emissions: Reduction ⁵ in emissions intensity of BHP-chartered shipping of our products (%)		41	✓	Maritime transportation: 2030 goal to support 40 per cent GHG emissions intensity reduction of BHP-chartered shipping of BHP products
Social investment (US\$ m)		149.6	186.4	Voluntary investment focused on the six pillars of our social value framework
Indigenous procurement spend (US\$ m)		332.6	149.9	Purchases from Indigenous vendors of US\$269 m in FY23
Female employee representation ⁶ (%)		35.2	32.3	Aspirational goal for gender balance by the end of FY25
Indigenous employee representation (%)	Australia ⁷	8.6	8.3	Aim to achieve 9.7 per cent by the end of FY27
	Chile ⁸	9.7	8.7	Aim to achieve 10.0 per cent by the end of FY25
	Canada ⁹	7.7	7.2	Aim to achieve 20.0 per cent by the end of FY26
Area under nature-positive management practices ¹⁰ (%)		1.3	1.0	2030 goal of having at least 30 per cent of the land and water we steward ¹¹ under conservation, restoration or regenerative practices

1. All data points are presented on a total operations basis, unless otherwise noted. Excludes OZ Minerals operations and functions.

2. Includes selection of key social value framework metrics. Additional metrics are included in the Annual Report OFR section 6.

3. Combined employee and contractor frequency per 1 million hours worked.

4. For our baseline year of FY20, our operational GHG emissions were 14.5 Mt CO₂-e. FY20 baseline and performance data has been adjusted for divestment of our Petroleum business (merger with Woodside completed on 1 June 2022) and our interest in BHP Mitsui Coal (completed on 3 May 2022), and for methodological changes (use of Intergovernmental Panel on Climate Change (IPCC) Assessment Report 5 (AR5) Global Warming Potentials and the transition to a facility-specific GHG emission calculation methodology for fugitives at Caval Ridge).

5. Against calendar year (CY) 2008. CY08 was selected as the baseline year for this goal to align with the base year for the International Maritime Organisation's 2030 emissions intensity goal and its corresponding reasoning and strategy.

6. At 30 June. We define gender balance as a minimum 40 per cent women and 40 per cent men in line with the definitions used by entities such as the International Labour Organization.

7. Indigenous employee representation at Minerals Australia operations, which was 8.6% at 30 June 2023. Total Indigenous employee representation in Australia, including non-operational roles (2.7%), was 7.7% at 30 June 2023. While for FY23 this does not include employees of OZL who joined BHP via acquisition on 2 May 2023, former OZL operations in Australia had 3.8% Indigenous employee representation at 30 June 2023.

8. Indigenous employee representation at Minerals Americas operations in Chile, which was 9.7% at 30 June 2023.

9. Indigenous employee representation at the Jansen Potash project and operations in Canada, which was 7.7% at 30 June 2023. Total Indigenous workforce representation at the Jansen Potash project and operations, including contractors (21.4 per cent), was 20.8 per cent at 30 June 2023.

10. Area under our stewardship that has a formal management plan including conservation, restoration or regenerative practices. 1.3 per cent is calculated based on areas of land and water that we stewarded at 30 June 2023. Refer to the BHP ESG Standards and Databook 2023, available at <https://www.bhp.com/sustainability>, for more information.

11. Excluding greenfield exploration licences (or equivalent tenements), which are outside the area of influence of our existing mine operations. 30 per cent will be calculated based on the areas of land and water that we steward at the end of FY30.

Five operationalised dual fuelled LNG vessels:

Capable of up to 30 per cent GHG emissions reduction per journey²

Biofuels introduced into fuel mix:
Expect up to 19 per cent GHG emissions reduction per voyage leg³

1. World Steel in Figures 2023, World Steel Association.
2. When run on LNG compared to conventional fuel and taking into account efficiency of the vessel design.
3. Compared to conventional fuel. The biofuels used are certified under the International Sustainability and Carbon Certification systems.

Samarco and Renova Foundation

Samarco plans restart of second concentrator by CY25. R\$30.7 bn spent on reparation and compensation programs

Renova

- Claims processed for ~80%¹ of people on Renova's register and in its indemnification programs. Of those, ~75% were eligible for and have received payment
- Candonga² Hydro Power Plant is operating and connected to National Electricity System
- 42 programs to restore the environment and re-establish affected communities
- ~1.5 million pieces of data generated annually along the river confirm the water quality in the Doce River has returned to historic levels

Resettlement

- ~75% of resettlement cases³ completed across the region, with a further ~10% in progress, the majority of which are expected to be completed by end CY23
- >40 families have moved into their new homes including in the communities of Bento Rodrigues and Paracatu
- First local businesses are open in Bento Rodrigues and Paracatu, and the school in Bento Rodrigues has commenced classes

Samarco

- Approved restart of the second concentrator to increase operating capacity to 60% in CY25
- Reached agreement with a group of financial creditors to restructure its financial debt
- Germano pit dam decommissioning complete. Main dam decommissioning on track for FY29
- ~11,600 direct and indirect jobs created by Samarco, and ~R\$2.8 bn in taxes⁴ since restart

1. Based on current known number of claimants in Renova database.

2. Candonga is the Risoleta Neves Hydro Power Plant impacted by the dam failure.

3. Resettlement cases completed includes completed construction (families either moved in or handover to families in progress) or cash payment solution.

4. ~R\$2.8 bn in taxes contributed until June 2023 includes taxes generated from Samarco's value chain activities.

Oak Dam exploration project update¹

We have commenced the next phase of drilling as we work towards defining a first Mineral Resource²

Oak Dam Exploration Target FY23³

	Low	High
Mt	500	1,700
Cu%	0.8	1.1

The potential quantity and grade ranges of an Exploration Target are conceptual in nature and as such has insufficient exploration to estimate a Mineral Resource, and it is uncertain if further exploration or analysis will result in the estimation of a Mineral Resource.

Oak Dam strategy update

- Entered next phase of drilling campaign following environmental approvals in March 2023, progressing towards a first Mineral Resource
- Currently running nine drill rigs, with eleven rigs expected by November 2023
- 150 rooms accommodation camp and supporting facilities planned in 2023 to advance additional information

1. Refer to "BHP Operational Review for the year ended 30 June 2023, Appendix 1 – Oak Dam Exploration Target".
2. The potential quantity and grade of an Exploration Target is conceptual in nature and as such there has been insufficient exploration to estimate a Mineral Resource, and it is uncertain if further exploration or analysis will result in the estimation of a Mineral Resource.
3. The exploration target using the BHP range analysis process based on drilling provided in "BHP Results for the half year ended 31 December 2022, Appendix 1 – Explanatory Notes and JORC table 1".

Oak Dam project schematic cross section

(Oak Dam cross section showing the target is open at depth, south and west of the Hardy Hill fault)

Competent Person Statement – Oak Dam

Competent Persons Statement

The information in this presentation that relates to Exploration Targets is based on information compiled by Dr. Kathy Ehrig, a Competent Person who is a Fellow of The Australasian Institute of Mining and Metallurgy and a Fellow of the Australian Institute of Geoscientists.

Dr. Kathy Ehrig has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results'. Dr. Kathy Ehrig consents to the inclusion in the presentation of the matters based on her information in the form and context in which it appears.

Chilean copper leaching overview

Studies progressing on options to partially offset longer term grade decline in copper

Significant resource potential

- Escondida ~26 Bt at 0.52% grade
- Spence ~2.5 Bt at 0.43% grade
- Cerro Colorado ~2.3 Bt at 0.40% grade

Success with BHP designed leaching technology Full SaL

- Full SaL, a BHP designed leaching technology, has been successfully deployed at Spence and is on track to be implemented at Escondida
- Escondida expects first production in FY25 producing ~410 kt in copper cathodes over a 10-year period through improved recoveries and shorter leach cycle times for secondary sulphide ores
- Capital expenditure is expected to be approximately US\$300 m (100 per cent basis) with first production during FY25

Studies actively progressing on ores from across our Chilean assets

- Five leaching technologies under study or execution with active trials and pilots aiming to unlock both resource and latent capacity
- BioLeach already in operation at Escondida
- Assessing both BHP developed technology and partnering with external parties to maximise optionality

BHP Leaching technologies	Cycle time	Capital Cost	Potential production impact
BioLeach Existing methodology in operation, uses acid and bacterial leaching	 Long	Existing process	Existing process
Full SaL 2 Leaching of crushed material with high chloride concentrations	 Medium		
BHP Leach Leaching with alternative reagents and increased process temperatures	 Short		

Other technologies

Jetti

Addition of catalyst to current bioleach process

Nuton

Rio Tinto Technology that uses catalyst and temperature to processes primary hypogene ore among others

Competent Person Statement – Copper Mineral Resources

Copper Mineral Resources Competent Persons Statement

The information in next slide relates to Copper Mineral Resources as at 30 June 2023. Mineral Resources are inclusive of Ore Reserves and is based on information compiled by Marcelo Cortes as Competent Person (compiler) for all declared Mineral Resources. The information in this presentation that relates to the FY2023 Mineral Resources reported by BHP in accordance with the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves, 2012' ('The JORC Code 2012 Edition') in the 2023 BHP Annual Report, available to view on www.bhp.com.

M. Cortes is a current Member of the Australasian Institute of Mining and Metallurgy (MAusIMM) and he is a full-time employee of BHP. M. Cortes has sufficient experience that is relevant to the style of mineralisation and type of deposits under consideration and to the activity which he is undertaking to qualify as Competent Person as defined in the JORC Code 2012 Edition. M. Cortes owns shares in BHP and is entitled to participate in employee share holding plans. M. Cortes consents to the inclusion in the presentation of the matters based on his information in the form and context in which it appears.

Mineral Resources as presented are reported in 100 per cent terms. Dry tonnages are reported and all tonnage and quality information has been rounded, hence small differences may be present in the totals. Total contained copper metal is presented in the table below as kilo tonnes (kt). Total contained Cu Metal presented is at equity basis. No metallurgical recovery has been applied to the calculation of contained copper metal. Mineral Resources classification is applied based on mineralisation type, geological understanding and an assessment of reasonable prospects for eventual economic extraction.

Competent Person Statement – Copper Mineral Resources

Continued capital allocation discipline

Strong competition for capital as we focus on creating value

1. Excess cash includes total net cash outflow of US\$1.5 bn (FY22: US\$2.6 bn) which comprises dividends paid to non-controlling interests of US\$1.2 bn (FY22: US\$2.5 bn); net investment and funding of equity accounted investments of US\$0.6 bn (FY22: US\$0.3 bn) and an adjustment for exploration expenses of US\$(0.3) bn (FY22: US\$(0.2) bn) which is classified as organic development in accordance with the Capital Allocation Framework.

Return on Capital Employed

ROCE of 28.8% for FY23

ROCE

(%)

Note: ROCE represents profit after tax excluding exceptional items and net finance costs (after tax), which are annualised for half year results, divided by average capital employed. Average capital employed is net assets less net debt for the last two reporting periods.

Financial results

22 August 2023

ROCE by asset

(%)

1. Antamina: average capital employed represents BHP's equity interest.

Note: NSWEC has not been shown as ROCE is distorted by negative capital employed due to the rehabilitation provision being the primary balance remaining on Balance Sheet following previous impairments. Jansen and West Musgrave have not been shown as they are under development.

Balance sheet

Net debt of US\$11.2 bn and gearing of 18.7%

Movements in net debt
(US\$ bn)

Debt maturity profile²
(US\$ bn)

1. NCIs: dividends paid to non-controlling interests of US\$1.2 bn predominantly relate to Escondida.

2. Debt maturity profile: all debt balances are represented in notional USD inception values and based on financial years; as at 30 June 2023; subsidiary debt is presented in accordance with IFRS 10 and IFRS 11.

3. Debt maturity profile: includes hybrid bonds (1.4% of portfolio, in Euro) with maturity shown at first call date.

Financial results

22 August 2023

BHP guidance

Group	FY24e	
Capital and exploration expenditure (US\$ bn)	~10.0	Cash basis.
Split by category:		
Maintenance and decarbonisation capital	3.1	Includes non-discretionary spend for deferred development and production stripping; risk reduction, compliance and asset integrity; and decarbonisation.
Improvement capital	3.3	Includes projects that enable improved productivity, quality, facilities and organisational culture.
Major capital in steelmaking materials	0.5	
Major capital in future-facing commodities	2.7	Includes Jansen, Full SaL (Escondida) and West Musgrave.
Exploration	0.4	
Split by segment:		
Copper	4.2	Includes ~US\$0.9 bn for growth and exploration.
Iron ore	2.0	
Coal	0.7	
Potash	1.2	Includes ~US\$1.0 bn for Jansen Stage 1, and ~US\$125 m of pre-commitment spend for Jansen Stage 2.
Nickel	0.8	
Other	1.1	Includes West Musgrave.

BHP guidance (continued)

Copper	FY24e	Medium term	
Copper production (kt)	1,720 – 1,910		Escondida: 1,080 – 1,180 kt; Spence: 210 – 250 kt ; Copper South Australia: 310 – 340 kt; Antamina: 120 – 140 kt (zinc 85 – 105 kt).
Escondida			
Copper production (kt, 100% basis)	1,080 – 1,180	1,200 – 1,300	Medium term refers to FY25 and FY26.
Unit cash costs (US\$/lb)	1.40 – 1.70	1.30 – 1.60	Medium term refers to FY25 and FY26. Excludes freight and government royalties; net of by-product credits; based on an exchange rate of USD/CLP 810.
Spence			
Copper production (kt)	210 – 250	~250	
Unit cash costs (US\$/lb)	2.00 – 2.30		Excludes freight; net of by-product credits; based on an exchange rate of USD/CLP 810.
Iron Ore			
	FY24e	Medium term	
Iron ore production (Mt)	254 – 264.5		Western Australia Iron Ore: 250 – 260 Mt; Samarco 4 – 4.5 Mt.
Western Australia Iron Ore			
Iron ore production (Mt, 100% basis)	282 – 294	>305	
Unit cash costs (US\$/t)	17.40 – 18.90	<17	Excludes freight and government royalties; based on an exchange rate of AUD/USD 0.67.
Sustaining capital expenditure (US\$/t)	–	~5.5	Medium term average; +/- 50% in any given year. Excludes costs associated with carbon abatement and automation programs.
Coal			
	FY24e		
BMA			
Production (Mt, 100% basis)	56 – 62		
Unit cash costs (US\$/t)	95 – 105		Excludes freight and royalties; based on an exchange rate of AUD/USD 0.67.
NSWEC			
Production (Mt)	13 – 15		
Nickel			
	FY24e		
Production (kt)	77 – 87		

Note: Medium term refers to a five-year horizon, unless otherwise noted.
